**Calculus Combo** Laura Taalman, Peter Kohn, 2013-01-11      *Calculus I with Integrated Precalculus* Laura Taalman, 2013-01-14 Taalman's *Calculus I with Integrated Precalculus* helps students with weak mathematical backgrounds be successful in the calculus sequence without retaking a precalculus course. Taalman's innovative text is the only book to interweave calculus with precalculus and algebra in a manner suitable for math and science majors, not a rehashing or just in time review of precalculus and algebra but rather a new approach that uses a calculus level toolbox to examine the structure and behavior of algebraic and transcendental functions. This book was written specifically to tie in with the material covered in Taalman Kohn Calculus. Students who begin their calculus sequence with *Calculus I with Integrated Precalculus* can easily continue on to *Calculus II* using the Taalman Kohn text.

This annual anthology brings together the year's finest mathematics writing from around the world and you don't need to be a mathematician to enjoy the pieces collected here. These essays from leading names and fresh new voices delve into the history, philosophy, teaching, and everyday aspects of math, offering surprising insights into its nature, meaning, and practice, and taking readers behind the scenes of today's hottest mathematical debates. Here Viktor Blaj gives a brief history of lockdown mathematics, Yelda Nasifoglu decodes the politics of a seventeenth century play in which the characters are geometric shapes, and Andrew Lewis Pye explains the basic algorithmic rules and computational procedures behind cryptocurrencies. In other essays, Terence Tao candidly recalls the adventures and misadventures of growing up to become a leading mathematician, Natalie Wolchover shows how old math gives new clues about whether time really flows, and David Hand discusses the problem of dark data, information that is missing or ignored. And there is much, much more.
