#### ■ DESCRIPTION

This lamp dimming module is a Z-Wave® enabled device and is fully compatible with any Z-Wave® enabled network. Z-Wave® enabled devices displaying the Z-Wave logo can also be used with it regardless of the manufacturer. In a Z-Wave® network, each device is designed to act as a wireless repeater. Repeaters will retransmit the RF signal from one device to another until the intended device is reached. This ensures that the signal is received by its intended destination by routing the signal around obstacles and radio dead spots.

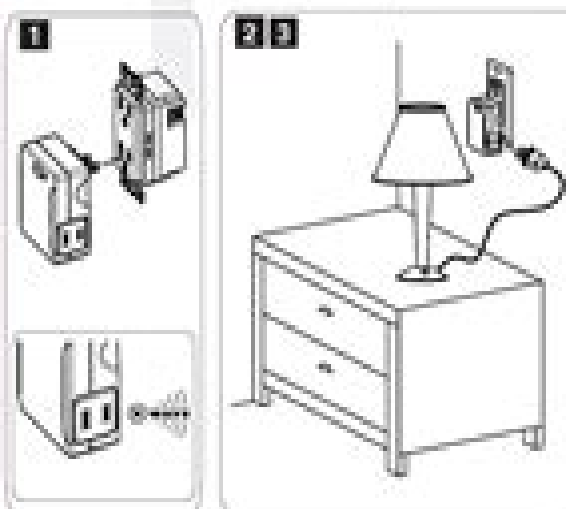

## WARNINGS AND CAUTIONS

To be installed and/or used in accordance with appropriate electrical codes and regulations. Exercise extreme caution when using Z-Wave devices to control appliances. Operation of the Z-Wave device may be in a different room than the controlled appliance, also an unintentional activation may occur if the wrong button on the remote is pressed. Z-Wave devices may automatically be powered on due to smart event programming. Depending upon the appliance, these unintentional or unintentional operation could possibly result in a hazardous condition.

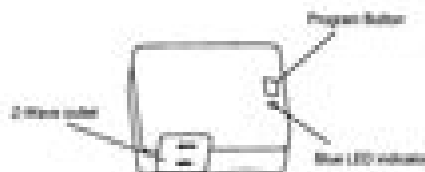

If you are unsure or uncomfortable about performing the installation, please consult a qualified electrician.

#### ■ INSTALLATION

1. Plug the ZW1P Lamp Dimming Module into a 120VAC, 60Hz outlet.
2. Plug the lamp into the ZW1P Lamp Dimming Module. Make sure the lamp to be controlled does not exceed 300 Watts (not for use with fluorescent lights, motor loads, or magnetic or electronic transformers.)
3. Turn the knob or switch on the lamp to the ON position.

#### ■ OPERATION

#### Basic Operation

The connected light can be turned ON in two ways:

1. With a Z-wave remote.
2. Manually with the program button on the Z-wave module.

#### Remote Control

Z-Wave remotes provide control of an individual device, Groups of devices and Scenes. Please refer to your remote control's instructions for detail on its capabilities and instructions for adding and controlling devices.

#### Manual Control

The Front Panel Program Button on the ZW1P dimming module allows the user to:

1. To manually turn ON the ZW1P Lamp Dimming Module, press and release the program button. The blue indicator LED will turn ON, and the lamp plugged into the ZW1P Lamp Dimming Module will also turn ON.
2. To manually turn OFF the ZW1P Lamp Dimming Module, simply press and release the program button. The blue indicator will turn OFF and the lamp plugged into the ZW1P Lamp Dimming Module will also turn OFF.
3. To manually dim the ZW1P Lamp Dimming Module, press and hold the program button until the desired lighting level has been reached.
4. Refer to the instruction for your primary controller to access the setup function and include or exclude devices.

#### ADVANCED OPERATION

The following Advanced Operation parameters require that you have an advanced controller. However, basic remotes do not have this capability.

#### All On/All Off

Depending upon your primary controller, the ZW1P dimming module can be set to respond to ALL ON and ALL OFF commands in up to four different ways. Some controllers may not be able to change the response from its default setting. Please refer to your controller's instructions for information on whether or not it supports the configuration function and if so, how to change the setting.

#### The four possible responses are:

- It will respond to ALL-ON and the ALL-OFF command (default).
- It will not respond to ALL-ON or ALL-OFF commands.
- It will respond to the ALL-OFF command but will not respond to the ALL-ON command.
- It will respond to the ALL-ON command but will not respond to the ALL-OFF command.

#### ■ WIRELESS RANGE

This device complies with the Z-Wave standard of open-air, line of sight transmission distances of 100 feet. Actual performance in a home depends on the numbers of walls between the remote controller and the destination device, the type of construction and the number of Z-Wave enabled devices installed in the control network.

#### Things to consider regarding RF range:

- Each wall or obstacle (i.e. refrigerator, big screen TV, etc.) between the remote or a Z-Wave device and the destination device will reduce the maximum range by approximately 25-50%.
- Brick, tile or concrete walls block more of the RF signal than walls made of wooden studs and plasterboard (drywall).
- Wire mounted Z-Wave devices installed in metal junction boxes will suffer a significant loss of range (approximately 20%) since the metal box blocks a large part of the RF signal.
