PHOTOVIDEOi ,2005-12 A local Singaporean magazine dedicated to photography and videography **Fish Swimming in Turbulent Waters** Hubert Chanson,Xinqian Leng,2020-09-13 Low level river crossings including culverts are important for delivering a range of valuable socioeconomic services including transportation and hydrological control These structures are also known to have negative impacts on freshwater river system morphology and ecology including the blockage of upstream fish passage particularly small body mass fish species Given the enormous environmental problems created by road crossings new hydraulic engineering guidelines are proposed for fish friendly multi cell box culvert designs The focus of these guidelines is on smooth box culverts without appurtenance with a novel approach based upon three basic concepts I

the culvert design is optimized for fish passage for small to medium water discharges and for flood capacity for larger discharges II low velocity zones are provided along the wetted perimeter in the culvert barrel and quantified in terms of a fraction of the wetted flow area where the local longitudinal velocity is less than a characteristic fish speed linked to swimming performances of targeted fish species and III the culvert barrel is smooth without any other form of boundary treatment and appurtenance The present monograph develops a number of practical considerations in particular relevant to box culvert operations for less than design discharges It is argued that upstream fish passage capabilities would imply a revised approach to maintenance in part linked to the targeted fish species This reference work is authored for civil and environmental engineers as well as biology and ecology scientists interested in culvert design While the book is aimed to professionals the material is also lectured in postgraduate courses and in professional short courses *HWM* ,2006-08 Singapore s leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews
