Ch'in Reading Card One

An Introduction to China

When you think of China, do you see Chinese food, tea, silk fans and the Great Wall? All these things and many more have become linked with the oriental country of China.

Though many people enjoy Chinese food picked up at the corner restaurant, we also eat, drink, wear and use other items that originated in China. Did you know that paper was invented in China?

Before we look further into China and its history, we should first find out where this most interesting country is located and learn a few geological facts about the land.

China is located on the continent we know as Asia. It lies between 20° N latitude and 50° N latitude, and 75° E longitude and 145° E longitude. On its eastern and southeastern coasts lie the ocean, specifically the Yellow Sea, the East China Sea, and the South China Sea. These seas are all part of the world's largest ocean, the Pacific.

China's neighbor to the north is Russia, to the west is India, and to the south is Bangladesh, Burma, Thailand, and Laos. North and South Korea are her nearest neighbors to the east, and across the Sea of Japan lies the country of Japan.

The name *China* is not what the Chinese gave themselves, but rather a name adopted by people from Europe who first visited China approximately 2 400 years ago. China at that time was ruled by a dynasty called the Ch'in. So the European explorers referred to that country as China. The Chinese preferred to call their country **The Middle Kingdom** because they thought that they were the center of their world long before they had contact with other countries. Today, China's formal name when translated into English, is the **Middle Flowery People's Republic**.

differential equation wikipedia - Oct 11 2022

web in mathematics a differential equation is an equation that relates one or more unknown functions and their derivatives 1 in applications the functions generally represent physical quantities the derivatives represent their rates of change and the differential equation defines a relationship between the two

differential equation formula meaning formulas solved - Jun 07 2022

web some differential equation formula examples for some function g find another function f such that $\frac{dy}{dx} = f(x)$ where $y = f(x)$ this is the differential equation therefore an equation consisting of derivative or derivatives of the dependent variable with respect to the independent variable is called a differential equation
