David Maidment Michael Crane and Sandi Glendinning Editors With growing pressure on natural resources and landscapes

there is an increasing need to predict the consequences of any changes to the environment Modelling plays an important role

in this by helping our understanding of the environment and by forecasting likely impacts In recent years moves have been

made to link models to Geographical Information Systems to provide a means of analysing changes over an area as well as

over time GIS and Environmental Modeling explores the progress made to date in integrating these two software systems

Approaches to the subject are made from theoretical technical as well as data stand points The existing capabilities of

current systems are described along with important issues of data availability accuracy and error Various case studies

illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields

The future needs and prospects for integrating GIS and environmental models are also explored with developments in both

data handling and modelling discussed The book brings together the knowledge and experience of over 100 researchers from

academic commercial and government backgrounds who work in a wide range of disciplines The themes followed in the text

provide a fund of knowledge and guidance for those involved in environmental modelling and GIS The book is easily

accessible for readers with a basic GIS knowledge and the ideas and results of the research are clearly illustrated with both
