Evolvable Systems: From Biology to Hardware Gianluca Tempesti, Andy Tyrrell, Julian F. Miller, 2010-08-30 Biology has inspired electronics from the very beginning the machines that we now call computers are deeply rooted in biological metaphors Pioneers such as Alan Turing and John von Neumann openly declared their aim of creating artificial machines that could mimic some of the behaviors exhibited by natural organisms Unfortunately technology had not progressed enough to allow them to put their ideas into practice The 1990s saw the introduction of programmable devices both digital FPGAs and analogue FPAs These devices by allowing the functionality and the structure of electronic devices to be easily altered enabled researchers to endow circuits with some of the same versatility exhibited by biological entities and sparked a renaissance in the field of bio inspired electronics with the birth of what is generally known as evolvable hardware Ever since the field has progressed along with the technological improvements and has expanded to take into account many different biological processes from evolution to learning from development to healing Of course the application of these processes to electronic devices is not always straightforward to say the least but rather than being discouraged researchers in the community have shown remarkable ingenuity as demonstrated by the variety of approaches presented at this conference and included in these proceedings

Decision Science in Action Kusum Deep, Madhu Jain, Said Salhi, 2018-09-12 This book provides essential insights into a range of newly developed numerical optimization techniques with a view to solving real world problems. Many of these problems can be modeled as nonlinear optimization problems but due to their complex nature it is not always possible to solve them using conventional optimization theory. Accordingly the book discusses the design and applications of non conventional numerical optimization techniques including the design of benchmark functions and the implementation of these techniques to solve real world optimization problems. The book's twenty chapters examine various interesting research topics in this area including Pi fraction based optimization of the Pantoja Bretones Martin PBM antenna benchmarks benchmark function generators for single objective robust optimization algorithms convergence of gravitational search algorithms on linear and quadratic functions and an algorithm for the multi variant evolutionary synthesis of nonlinear models with real valued chromosomes. Delivering on its promise to explore real world scenarios the book also addresses the seismic analysis of a multi story building with optimized damper properties the application of constrained spider monkey optimization to solve portfolio optimization problems the effect of upper body motion on a bipedal robot's stability an ant colony algorithm for routing alternate fuel vehicles in multi depot vehicle routing problems enhanced fractal dimension based feature extraction for thermal face recognition and an artificial bee colony based hyper heuristic for the single machine order acceptance and scheduling problem. The book will benefit not only researchers but also organizations active in such varied fields as Aerospace Automotive Biotechnology Consumer Packaged Goods Electronics Finance Business Banking Oil Gas Geosciences and Pharma to name a few.
