Challenging Operations Challenging Operations:

Challenging Operations Katherine C. Kellogg, 2011-07-05 In 2003 in the face of errors and accidents caused by medical and surgical trainees the American Council of Graduate Medical Education mandated a reduction in resident work hours to eighty per week Over the course of two and a half years spent observing residents and staff surgeons trying to implement this new regulation Katherine C Kellogg discovered that resistance to it was both strong and successful in fact two of the three hospitals she studied failed to make the change Challenging Operations takes up the apparent paradox of medical professionals resisting reforms designed to help them and their patients Through vivid anecdotes interviews and incisive observation and analysis Kellogg shows the complex ways that institutional reforms spark resistance when they challenge long standing beliefs roles and systems of authority At a time when numerous policies have been enacted to address the nation s soaring medical costs uneven access to care and shortage of primary care physicians Challenging Operations sheds new light on the difficulty of implementing reforms and offers concrete recommendations for effectively meeting that challenge *History of Operations Research in the United States Army, Volume 2: 1961-1973, 2008 ,2008* History of

Mental Fatigue Assessment in Demanding Marine Operations Thiago Gabriel Monteiro, Houxiang Zhang, 2024-06-13 This book investigates how human mental fatigue MF can be objectively measured during demanding maritime operations The maritime domain is characterized by demanding operations These operations can be especially complex and dangerous when they require coordination between different maritime vessels and several maritime operators The best approach to quantify MF is through the use of physiological sensors including electroencephalogram EEG electrocardiogram electromyogram temperature sensor and eye tracker can be applied individually or in conjunction in order to collect relevant data that can be mapped to an MF scale More than simpler sensor fusion this book bridges the gap between relevant sensor data and a quantifiable MF level using both data driven and model based approaches Data driven part investigates the use of different NNs combined for the MF assessment MFA task Among the different architectures tested convolutional neural networks CNN showed the best performance when dealing with multiple physiological data channels Optimization was used to improve the performance of CNN in the cross subject MFA task Testing different

combinations of physiological sensors indicated a setup consisting of EEG sensor only was the best option due to the trade off between assessment precision and sensor framework complexity These two factors are of great importance when considering an MFA system that could be implemented in real life scenarios The model based discussion applies the current knowledge about the use of EEG data to characterize MF to develop an MF approach to quantify the progression of MF in maritime operators In the research presented in this book realistic vessel simulators were used as a platform for experimenting with different operational scenarios and sensor setups

The Globesity Challenge to General Surgery Mirto Foletto, Raul J. Rosenthal, 2014-04-17 The increasing prevalence of morbid obesity has led the World Health Organization to coin the descriptive term globesity to reflect the worldwide nature of the problem Providing health care to these patients especially when surgery is required can be extremely challenging owing to the specific needs in respect of logistics facilities and professional expertise Appropriate care has to date often been unachievable and unaffordable outside of established bariatric centers but such centers themselves usually have insufficient capacity and resources to cope with the demand among the general population This book therefore provides a wealth of guidance and helpful tips and tricks on how to deal with obese patients within a general surgery setting Importantly it highlights the need for global rethinking on public health as regards resource allocation and patterns and standards of care with the ultimate goal of improving outcomes through greater affordability
