Difficult Euclidian Geometry Question On Circles:

The Impossibility of Squaring the Circle in the 17th Century Davide Crippa, 2019-03-06 This book is about James Gregory's attempt to prove that the quadrature of the circle, the ellipse and the hyperbola cannot be found algebraically. Additionally, the subsequent debates that ensued between Gregory, Christiaan Huygens and G. W. Leibniz are presented and analyzed. These debates eventually culminated with the impossibility result that Leibniz appended to his unpublished treatise on the arithmetical quadrature of the circle. The author shows how the controversy around the possibility of solving the quadrature of the circle by certain means algebraic curves pointed to metamathematical issues, particularly to the completeness of algebra with respect to geometry. In other words, the question underlying the debate on the solvability of the circle squaring problem may be thus phrased: can finite polynomial equations describe any geometrical quantity? As the study reveals, this question was central in the early days of calculus when transcendental quantities and operations entered the stage. Undergraduate and graduate students in the history of science, in philosophy and in mathematics will find this book appealing, as well as mathematicians and historians with broad interests in the history of mathematics.

Irrationality, Transcendence and the Circle-Squaring Problem Eduardo Dorrego López, Elías Fuentes Guillén, 2023-03-07 This publication includes an unabridged and annotated translation of two works by Johann Heinrich Lambert: 1728/1777 written in the 1760s, *Vorläufige Kenntnisse für die, so die Quadratur und Rectification des Circuls suchen* and *Mémoire sur quelques propriétés remarquables des quantités*

transcendentes circulaires et logarithmiques The translations are accompanied by a contextualised study of each of these works and provide an overview of Lambert's contributions showing both the background and the influence of his work In addition by adopting a biographical approach it allows readers to better get to know the scientist himself Lambert was a highly relevant scientist and polymath in his time admired by the likes of Kant who despite having made a wide variety of contributions to different branches of knowledge later faded into an undeserved secondary place with respect to other scientists of the eighteenth century In mathematics in particular he is famous for his research on non Euclidean geometries although he is likely best known for having been the first who proved the irrationality of pi In his Mmoire he conducted one of the first studies on hyperbolic functions offered a surprisingly rigorous proof of the irrationality of pi established for the first time the modern distinction between algebraic and transcendental numbers and based on such distinction he conjectured the transcendence of pi and therefore the impossibility of squaring the circle

Reminiscences of the Vienna Circle and the Mathematical Colloquium

Karl Menger,2013-03-07 Karl Menger was born in Vienna on January 13 1902 the only child of two gifted parents His mother Hermione nee Andermann 1870 1922 in addition to her musical abilities wrote and published short stories and novelettes while his father Carl 1840 1921 was the noted Austrian economist one of the founders of marginal utility theory A highly cultured man and a liberal rationalist in the nineteenth century sense the elder Menger had witnessed the defeat and humiliation of the old Austrian empire by Bismarck's Prussia and the subsequent establishment under Prussian leadership of a militaristic mystically nationalistic state capitalist German empire in effect the first modern military industrial complex These events helped frame in him a set of attitudes that he later transmitted to his son and which included an appreciation of cultural attainments and tolerance and respect for cultural differences combined with a deep suspicion of rabid nationalism particularly the German variety Also a fascination with structure whether artistic scientific philosophical or theological but a rejection of any aura of mysticism or mumbo jumbo accompanying such structure Thus the son remarked at least once that the archangels chant that begins the Prolog im Himmel in Goethe's Faust was perhaps the most beautiful thing in the German language but of course it doesn't mean anything

Enriques, Katharine Head Royce, 1914 Purchase of this book includes free trial access to www.millionbooks.com where you can read more than a million books for free This is an OCR edition with typos Excerpt from book I INTRODUCTION 1 THE SPECIAL PROBLEMS AND GENERAL IDEAS OF SCIENCE A DOUBLE fatality hangs over one who has consecrated his days to science If he would contribute to the advancement of science he must prepare himself first of all by a patient study of the thousands of details which constitute its technique he must learn the results obtained by numberless laborers whose researches tend toward the same aim He must master their conceptions and subject them to a new criticism This work so engrosses the attention of the investigator that he has little time left for casting a glance over the branches of science which are developing beside him Yet this necessity also weighs upon his soul If on the one hand he ought to study special problems on the other he cannot exempt himself from considering the ends set before special research by rising to a general outlook which shall command the view of a broader scientific basis This double necessity causes a conflict of tendencies and this conflict in our system of production results in a loss of time and of work from which the intellectual world suffers Most investigators if they are not rightly directed shut themselves up in a narrow circle and fall into a blind empiricism Others lose themselves in the region of confused generalities while a few finer spirits find the way for themselves and often must win again by fresh efforts that which they should have a right to expect as the outcome of the completed work of their companions in labor But the age of heroes that of Descartes or Leibniz whose genius opened all the doors of science seems closed forever The conquests of the past weigh upon the present and upon the future And if it is permissible to hope that a happier use of our intellectual power

Using History to Teach Mathematics Victor J. Katz, 2000-09-21 This volume examines how the history of mathematics can find application in the teaching of mathematics itself

Patterns of Change Ladislav Kvasz, 2008-10-28 Kvasz's book is a contribution to the history and philosophy of mathematics or as one might say the historical approach to the philosophy of mathematics This approach is for mathematics what the history and philosophy of science is for science Yet the historical approach to the philosophy of science appeared much earlier than the historical approach to the philosophy of mathematics The first significant work in the history and philosophy of science is perhaps William Whewell's *Philosophy of the Inductive Sciences* founded upon their History This was originally published in 1840 a second enlarged edition appeared in 1847 and the third edition appeared as three separate works published between 1858 and 1860 Ernst Mach's *The Science of Mechanics A Critical and Historical Account of Its Development* is certainly a work of history and philosophy of science It first appeared in 1883 and had six further editions in Mach's lifetime 1888 1897 1901 1904 1908 and 1912 Duhem's *Aim and Structure of Physical Theory* appeared in 1906 and had a second enlarged edition in 1914 So we can say that history and philosophy of science was a well established field by the end of the 19 and the beginning of the 20 century By contrast the first significant work in the history and philosophy of mathematics is Lakatos's *Proofs and Refutations* which was published as a series of papers in the years 1963 and 1964
