Digestive System Lab

Questions to Answer:

- How long is your gastrointestinal tract in total? How long is each organ individually?
- How does each organ move food?

Part 1: How long is your gastrointestinal tract? From the moment you eat your meal to the moment the moment you eliminate the waste left over from that meal, your food goes on an equally long journey. The gastrointestinal tract is one long tube of many organs starting at your mouth and ending at your anus, which your food passes through. Some of these organs do **chemical digestion** (break down food with enzymes and acids) some do **mechanical digestion** (break down food by force) and some complete **absorption** (remove essential nutrients from food). Just how long is the GI tract? In this portion of the lab, you are going to create a yardstick of your own gastrointestinal tract. You will measure and cut your food to be the approximate length of each GI tract organ and then tie those pieces of yarn together to form one long "trunk." Let's see how long that is!

Organ	Length of each organ (inches)	Time in each organ
Mouth		
Pharynx & Esophagus		
Stomach	12 inches	
Small Intestine		
Large Intestine		
Rectum	10 in	10 in
Anal		

- The **pharynx** is the first part of the gastrointestinal tract. You have seen this of fourty approximately 10 seconds.
 - To measure your mouth, food is placed at the back of your lips and pushed in until you start to swallow. Cut the piece of yarn left (10) EXTRA 10cm. Using a ruler or yard stick, measure the length of the yarn and estimate one inch. Measure the length of your mouth in inches on the state table above.
 - Using measuring tape, cut a piece of the red piece of yarn that says "mouth".
- Next, food enters your **pharynx**, just a short road for your throat. The pharynx splits into two: down the esophagus is the trachea. The trachea leads to the lungs and is not part of the gastrointestinal tract. The **esophagus** is a muscular tube which pushes food to the stomach. It takes four approximately 8 seconds to be pushed down your esophagus.

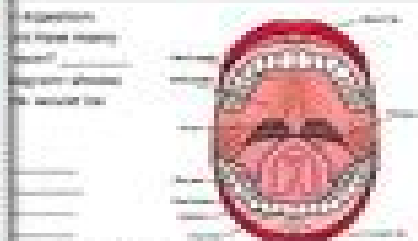

Stomach: Once all the food material has been pushed into the stomach bag, you will see 20 oz. of water, one quart of lemon juice or vinegar, and 2 drops of yellow food coloring in your stomach bag. The water, juice, and food coloring represent a fluid that your stomach produces known as **gastric fluid**. Gastric fluid is responsible for **chemical digestion**. The stomach is also made of smooth muscles and contracts every 15 to 20 seconds.

At the end of the lab, you will measure the effects of food through a series of steps to demonstrate the way the body works. First is a small group (1/2 cup of juice), a second empty plastic bag, a third (1/2 cup of juice), a fourth (1/2 cup of juice or vinegar). Place these into a baggie. Label the plastic bag with several "heads." The first digestion.

How long is your trunk? There are at least 10

chemical digestion. The first 2, about 10 minutes, is the first digestion. The first 2, about 10 minutes, is the first digestion. The first 2, about 10 minutes, is the first digestion.

How long is your trunk? There are at least 10

For chemical and mechanical digestion, but a small amount of water, water, water, and water are absorbed from the 1/2 of the "stomach" bag and your is very small "mouth" bag in separate absorption. Cause the "stomach" bag is your stomach, look as muscles, stomach, and water. There is a sample showing how it goes for the trachea to water. There is a sample showing how it goes for the trachea to water.

Stomach? Water back to part 1 (1/2 cup of the lab) of food.
