Contemporary Communication Systems Using MATLAB John G. Proakis,Masoud

Salehi,2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5

Feedback Control Problems Dean K. Frederick,Joe H. Chow,1995

This short book contains a large number of MATLAB based problems dealing with the topics covered in a first course on feedback control The ways in which MATLAB can be used to solve these problems are illustrated by detailed examples that lead the reader through the analytical steps of the solution and in many cases give a script of MATLAB commands A number of simplified models of real world systems are presented and used in the problems and what if variations This book is intended to serve as a supplement to one of the many feedback control textbooks available
