Tracking Early Career Researchers in EFL/ESL Studies examines the contextual factors that play a role in identity construction, resilience, academic stress, or career projections of early career researchers. Also, artificial intelligence (AI) is a rapidly increasing technology that can be applied to diagnostic imaging. In recent years, these tools have attracted great attention in the medical field to support preoperative planning, intraoperative guidance, diagnostics, and therapeutics, as well as for educational purposes. Indeed, interventional procedures and surgery applications are being developed to display virtual medical images and patient-specific 3D virtual models that can be manipulated before the intervention. These virtual anatomical models can be used to build physical replicas and/or to design patient-specific surgical

tools and therapeutic devices using advanced 3D printing technologies The virtual models can also be visually overlaid fused or integrated into reality using AR With AR visualization different types of virtual information can be projected in the surgeon's line of view facilitating navigation and decision making Also AI applied to diagnostic medical images is expected to produce significant innovations such as more efficient automatic image scan and processing and a more efficient examination and diagnosis workflow
