

Chapter 12**DNA and RNA****Section 12-1 DNA** (pages 287–294)

This section tells about the experiments that helped scientists discover the relationship between genes and DNA. It also describes the chemical structure of the DNA molecule.

Griffith and Transformation (pages 287–289)

1. What did Frederick Griffith want to learn about bacteria? He wanted to learn how certain types of bacteria produce pneumonia.
2. The strain of bacteria that caused pneumonia grew into _____ smooth _____ colonies on culture plates; harmless bacteria produced colonies with _____ rough _____ edges.
3. Circle the letter of each sentence that is true about Griffith's experiment.
☒ a. Mice injected with bacteria from smooth colonies died.
☐ b. Mice injected with bacteria from rough colonies died.
☐ c. Mice injected with heat-killed bacteria from smooth colonies died.
☒ d. Mice injected with a mixture of bacteria from heat-killed smooth colonies and live rough colonies died.
4. What result from Griffith's experiment suggested that the cause of pneumonia was not a chemical poison released by the disease-causing bacteria? The mice survived after being injected with heat-killed disease-causing bacteria.
5. What is transformation? It is the process by which one strain of bacteria changes into another.
6. What hypothesis did Griffith form from the results of his experiments? Some factor, which might contain a gene, was transferred from the heat-killed bacteria cells into the live cells.

Avery and DNA (page 289)

7. Is the following sentence true or false? Avery and his colleagues thought that the molecule required in transformation might also be the molecule of the gene. True
8. Briefly describe how Avery and his group determined which molecule was most important for transformation? They treated the extract of heat-killed bacteria with enzymes that destroyed proteins, lipids, carbohydrates, and other molecules, including RNA and DNA.

PREFACE The field of chemistry is ever evolving playing a pivotal role in our understanding of the natural world and the development of new technologies This Class 12 Chemistry textbook is designed to provide students with a comprehensive and in depth understanding of various chemical concepts theories and applications This book is structured to align with the latest syllabus and curriculum guidelines ensuring that the content is both relevant and rigorous Each chapter begins with a clear set of learning objectives providing a roadmap for students to understand what they will achieve by the end of the chapter We have included numerous diagrams illustrations and real life examples to make complex concepts more accessible and engaging To support the diverse learning needs of students this textbook includes a variety of pedagogical features

Conceptual Explanations Detailed explanations of key concepts designed to build a solid foundation in chemistry

Worked Examples Step by step solutions to problems demonstrating the application of concepts in various contexts

Practice Problems A wide range of problems at different levels of difficulty to reinforce learning and develop problem solving skills

Experimental Techniques Descriptions of essential laboratory techniques and experiments fostering practical skills and a hands on approach to learning

Real World Applications Insights into how chemistry is applied in various industries and research fields highlighting its relevance and impact on everyday life We have also incorporated review questions at the end of each chapter to help students consolidate their knowledge and prepare for examinations This textbook is the result of the collective efforts of experienced educators and subject matter experts We are confident that it will serve as a valuable resource for students fostering a deeper appreciation of chemistry and its significance in our world We encourage students to approach their study of chemistry with curiosity and enthusiasm as it is a subject that offers endless opportunities for discovery and innovation We hope this book will inspire the next generation of chemists to contribute to scientific advancements and the betterment of society

Biotechnology David P. Clark, Nanette J. Pazdernik, 2010-07-21 Unlike most biotechnology textbooks Dr David P Clark s Biotechnology approaches modern biotechnology from a molecular basis which grew out of the increasing biochemical understanding of physiology Using straightforward less technical jargon Clark manages to introduce each chapter with a basic concept that ultimately evolves into a more specific detailed principle This up to date text covers a wide realm of topics including forensics and bioethics using colorful illustrations and concise applications This book will help readers understand molecular biotechnology as a scientific discipline how the research in this area is conducted and how this technology may impact the future Up to date text focuses on modern biotechnology with a molecular foundation Basic concepts followed by more detailed specific applications Clear color illustrations of key topics and concepts Clearly written without overly technical jargon or complicated examples
