Challenged By Carbon The Oil Industry And Climate Change:

Challenged by Carbon Bryan Lovell, 2009-10-15 Is there a low carbon future for the oil industry Faced with compelling new geological evidence the petroleum industry can no longer ignore the consequences of climate change brought on by consumption of its products Yet the global community will continue to burn fossil fuels as we manage the transition to a low carbon economy As a geologist oil man academic and erstwhile politician Bryan Lovell is uniquely well placed to describe the tensions accompanying the gradual greening of the petroleum industry over the last decade He describes how given the right lead from government the oil industry could be environmental saviors not villains playing a crucial role in stabilizing emissions through the capture and underground storage of carbon dioxide Challenging prejudices of both the environmentalists and the oil industry Lovell ultimately assigns responsibility to us as consumers and our elected governments highlighting the need for decisive leadership and urgent action to establish an international framework of policy and regulation Bryan Lovell comments in a US News World Report article on Exxon s potential to go green [click here](#) Video from a performance of a folk song inspired by the book written and performed by Mike Excell at the Woodman Pub Ware UK Recording courtesy of Tony Dawes *Challenged by Carbon China Edition* Bryan Lovell, 2016-07-01

Climate Change and Society Riley E. Dunlap, Robert J. Brulle, 2015-08-24 Climate change is one of the most critical issues of the twenty first century presenting a major intellectual challenge to both the natural and social sciences While there has been significant progress in natural science understanding of climate change social science analyses have not been as fully developed Climate Change and Society breaks new theoretical and empirical ground by presenting climate change as a thoroughly social phenomenon embedded in behaviors institutions and cultural practices This collection of essays summarizes existing approaches to understanding the social economic political and cultural dimensions of climate change From the factors that drive carbon emissions to those which influence societal responses to climate change the volume provides a comprehensive overview of the social dimensions of climate change An improved understanding of the complex relationship between climate change and society is essential for modifying ecologically harmful human behaviors and institutional practices creating just and effective environmental policies and developing a more sustainable future Climate Change and Society provides a useful tool in efforts to integrate social science research natural science research and policymaking regarding climate change and sustainability Produced by the American Sociological Association s Task Force on Sociology and Global Climate Change this book presents a challenging shift from the standard climate change discourse and offers a valuable resource for students scholars and professionals involved in climate change research and policy

Engineering Aspects of Geologic CO₂ Storage Dayanand Saini, 2017-03-22 This timely book explores the lessons learned in and potentials of injecting supercritical CO₂ into depleted oil and gas reservoirs in order to maximize both hydrocarbon recovery and the storage capacities of injected CO₂ The author provides a detailed discussion of key engineering parameters of simultaneous CO₂ enhanced oil

recovery and CO₂ storage in depleted hydrocarbon reservoirs These include candidate site selection CO₂ oil miscibility maximizing CO₂ storage capacity in enhanced oil recovery operations well configurations and cap and reservoir rock integrity The book will help practicing professionals devise strategies to curb greenhouse gas emissions from the use of fossil fuels for energy production via geologic CO₂ storage while developing CO₂ injection as an economically viable and environmentally sensible business model for hydrocarbon exploration and production in a low carbon economy

Carbon Capture and Storage Ian Havercroft, Richard Macrory Hon KC, Richard Stewart, 2018-02-08 Carbon Capture and Storage CCS is increasingly viewed as one of the most significant ways of dealing with greenhouse gas emissions Critical to realising its potential will be the design of effective legal regimes at national and international level that can handle the challenges raised but without stifling a new technology of potential great public benefit These include long term liability for storage regulation of transport the treatment of stored carbon under emissions trading regimes issues of property ownership and increasingly the sensitivities of handling the public engagement and perception Following its publication in 2011 Carbon Capture and Storage quickly became required reading for all those interested in or engaged by the need to implement regulatory approaches to CCS The intervening years have seen significant developments globally Earlier legislative models are now in force providing important lessons for future legal design Despite these developments the growth of the technology has been slower in some jurisdictions than others This timely new edition will update and critically assess these updates and provide context for the development of CCS in 2018 and beyond

The Crises of Civilization Dipesh Chakrabarty, 2018-09-10 The world created by the legacies of empire and colonialism now confronts some deep crises of civility precipitated by globalization and climate change In this volume Dipesh Chakrabarty examines these distinct but interrelated issues side by side Varied ideas of civilization and humanism have shaped notions of a global humanity in the lingering twilight of the European empires Detailing these ideas in the section titled Global Worlds Chakrabarty outlines the conflicts and connections that arise from global encounters in our postcolonial age The second section The Planetary Human on the other hand explores the significance of planetary climate change for humanistic and postcolonial thought Chakrabarty argues that such change demands not only critiques of capitalism and inequality but also new thinking about the human species as a whole our patterns of justice writing of history and relationship with nature in the age of the Anthropocene The global is human centric in construction the planetary involves many other actors and thus includes the thorny question of how we go beyond the anthropocentric to discuss and conceptualize the agency of the non human

Climate Change Strategies: Handling the Challenges of Adapting to a Changing Climate Walter Leal Filho, Marina Kovaleva, Fátima Alves, Ismaila Rimi Abubakar, 2023-06-01 This book includes information experiences practical initiatives and projects around the subject matter and makes it available to a wide audience It addresses the scientific social political and cultural aspects of climate change impacts and respective solutions in an integrated and coherent way Climate change as a global phenomenon

imposes new challenges for survival Extreme weather events including heat waves storms droughts as well as rising sea levels warming oceans and melting glaciers threaten people s livelihoods and communities ecosystems and habitats Furthermore it affects the entire food chain and increases competition for natural resources fuelling socioeconomic tensions The results of the latest IPCC report highlight the urgent need for combating climate change The adaptation measures to be undertaken range across sectors thematic fields and geographical locations Based on this need the book focuses on the high quality interdisciplinary contributions on the scientific social economic political and cultural aspects of climate change challenges and solutions Environmental Technology in the Oil Industry Stefan Orszulik,2016-01-26 This significantly updated edition looks at each stage in the life cycle of petroleum products from exploration to end use examining the environmental pressures on the oil industry and its response Technical developments are progressing in line with environmental concerns and increasing sophistication of computer modelling techniques These subjects are interrelated but have often been dealt with independently This book explores these topics together in a way that is understandable to the non expert and those who are expert in one field but wish to see their expertise discussed in the overall context Written primarily for those working in the oil and related industries this book also provides essential reference material for government and research institutions and all those with an interest in environmental technological issues **The Carbon Harvest:**

Pondering Palm Oil and Global Warming Christie Cordova, In this compelling case study we explore the consequences of the palm oil industry on a concerning global issue Delving into the intricate relationship between global warming and this influential industry we uncover a myriad of interconnected factors that contribute to our rapidly changing climate As we analyze the environmental impact of palm oil production we shed light on the potential long term consequences for our planet Through this exploration we aim to deepen our understanding of the complex web of causes and effects in the realm of global warming and its critical association with the palm oil industry Join us on this journey of discovery as we unravel the relationship between these two pressing concerns **Carbon Governance, Climate Change and Business**

Transformation Adam Bumpus,James Tansey,Blas Luis Pérez Henríquez,Chukwumerije Okereke,2014-07-17 Transformation to a low carbon economy is a central tenet to any discussion on the solutions to the complex challenges of climate change and energy security Despite advances in policy carbon management and continuing development of clean technology fundamental business transformation has not occurred because of multiple political economic social and organisational issues Carbon Governance Climate Change and Business Transformation is based on leading academic and industry input and three international workshops focused on low carbon transformation in leading climate policy jurisdictions Canada USA and the UK under the international Carbon Governance Project CGP banner The book pulls insights from this innovative collaborative network to identify the policy combinations needed to create transformative change It explores fundamental questions about how governments and the private sector conceptualize the problem of climate change the conditions under which business

transformation can genuinely take place and key policy and business innovations needed Broadly the book is based on emerging theories of multi levelled multi actor carbon governance and applies these ideas to the real world implications for tackling climate change through business transformation Conceptually and empirically this book stimulates both academic discussion and practical business models for low carbon transformation Meeting the Challenges of Climate Change to Tourism Louis D'Amore, Patrick Kalifungwa, 2014-07-24 As UN Secretary General Ban Ki moon has stated Climate change is the pre eminent geopolitical and economic issue of the 21st century It rewrites the global equation for development peace and prosperity The scientific evidence is clear climate change is happening and the exposure to weather related disasters such as heat waves forest fires cyclones and flooding has the potential to seriously impact the tourism sector The travel and tourism industry is both a significant contributor to climate change being responsible for 5% of global greenhouse gas emissions and is directly impacted by it At the same time the industry is a vital driver of the global economy with an estimated US 6 6 trillion total contribution in 2012 and is particularly significant to developing and emerging economies where the impacts of climate change can be most disruptive This collection of papers is a timely and indispensable source of insights and models of best practice relating to the mitigation of and adaptation to climate change by various sectors of the industry

Oil Drilling: Techniques, Challenges, and Innovations Charles Nehme, Oil drilling has been a cornerstone of industrial progress shaping economies fueling transportation and powering industries worldwide From the first crude wells in the 19th century to today s advanced offshore rigs and horizontal drilling techniques the oil industry has evolved dramatically blending engineering ingenuity with groundbreaking technologies This book Oil Drilling Techniques Challenges and Innovations is designed to serve as both a comprehensive guide and a reflective exploration of an industry that has profoundly impacted modern civilization It is written for professionals in the oil and gas sector engineering students policymakers and anyone interested in understanding the intricate processes behind extracting one of the world s most critical resources In the pages ahead we delve into the technical aspects of drilling the challenges posed by extreme environments and the innovations that continue to reshape the industry At the same time we confront the environmental and societal questions that come with reliance on fossil fuels In a world increasingly focused on sustainability and renewable energy the role of oil drilling remains complex and contested but undeniably vital in the present energy landscape This book was inspired by the incredible individuals and teams who work tirelessly both onshore and offshore to extract resources safely and efficiently often in conditions that test human endurance and technological limits It also seeks to shed light on the balance between meeting today s energy needs and creating a sustainable future Whether you are an industry veteran or a curious reader this book aims to offer valuable insights into the oil drilling process from its earliest stages to the forefront of innovation My hope is that it not only informs but also inspires discussions on the future of energy technology and the environment Thank you for joining me on this journey beneath the surface into the fascinating world of oil drilling Charles

Nehme *Environmental Challenges Confronting the Oil Industry* Javier Estrada, Kristian Tangen, Helge Ole Bergesen, 1997 Since the late 1980s when the current tide of environmental concern began to rise every improvement made by the oil industry has been followed by new demands for further progress New problems have been placed on top of the old ones first smog in the inner cities and oil spills on the beaches then acid rain and forest die back followed by major tank disasters and renewed attention to urban air quality and finally climatic change The purpose of this book is to investigate whether the oil industry is able to extend and renew its social legitimacy as it faces its toughest agenda in a century the challenges stemming from its impact on the environment and the consequent public questioning of its role in society To find out whether and how the oil industry has responded to environmental issues in general and climatic change in particular five indicators of change vision image R D investments and government relations have been selected These have been assumed to be expressions of an environmental strategy which can be identified as reactive cautious or creative The empirical analysis begins with case studies of the environmental response of five major oil companies Shell Exxon BP Amoco and Statoil The next step is a case study of the refinery sector which is the most environmentally sensitive part of the industry in many ways In addition a brief description of how three industry associations have tackled the same environmental issues is included The main readership for this book will be policy makers planners and researchers in the oil industry and environmental consultants *Social, Political and Cultural Challenges of the BRICS* Ribeiro, Gustavo Lins, Dwyer, Tom, 2015-02-07 For the almost 40 years of its existence ANPOCS has contributed to introducing or consolidating new thematic areas in the academic agenda of debates in the Brazilian social sciences Commensurate with this history at the 37th Annual meeting hosted inguas de Lindoia S o Paulo in 2013 we organized a large International Symposium The BRICS and their social political and cultural challenges on the national and international levels There were six sessions of debates gathered under the umbrella of Development and public policies Social inclusion and social justice and Emerging powers and transformations in the international system followed by a final plenary session Around 30 anthropologists political scientists sociologists and researchers in international relations from Brazil Russia India China and South Africa met over three highly productive days As might be expected at ANPOCS the encounter was marked not only by the diversity of countries and disciplines but also by the theoretical and political diversity of the participants something already apparent in the composition of the Brazilian coordinators of the Symposium This book is just one tangible outcome of the papers and dialogues emerging from this encounter Like the Symposium the volume is divided into three sections Looking to address an international readership it is published in Portuguese and English

Beyond the Resource Curse Brenda Shaffer, Taleh Ziyadov, 2011-12-30 When countries discover that they possess large deposits of oil and natural gas the news is usually welcome Yet paradoxically if they rely on their wealth of natural resources they often set down a path of poor economic performance and governance challenges Only a few resource rich countries have managed to develop their economies fully and provide a better and sustainable standard of living for large segments of

their populations This phenomenon known as the resource curse is a core challenge for energy exporting states Beyond the Resource Curse focuses on this relationship between natural wealth and economic security discussing the particular pitfalls and consistent perils facing oil and gas exporting states The contributors to this volume look beyond the standard fields of research related to the resource curse They also shed new light on the specific developmental problems of resource rich exporting states around the globe including Azerbaijan Bahrain Cambodia East Timor Iran Norway Russia Trinidad and Tobago the United Arab Emirates and Venezuela Policy makers and academics think of energy security solely in terms of the interests of energy importers Beyond the Resource Curse shows that the constant volatility in energy markets creates energy security challenges for exporters as well

Mitigating Carbon Emissions and Haze in Southeast Asia's Peatlands: Opportunities and Challenges in Integrating Policy and Governance Helena Varkkey,Matthew Ashfold,Gusti Anshari,Alex M. Lechner,2024-09-27 Peatland ecosystems in Southeast Asia are globally important as carbon sinks rich in terrestrial and aquatic fauna and flora and important sources of livelihood for local communities However agribusiness driven land use change and drainage cause peatland degradation and peat fires which generate haze air pollution and lead to significant economic losses and health impacts Disturbed peatlands also become substantial sources of greenhouse gas GHG emissions While the problems of haze and climate change are connected through peatlands these issues have been treated largely separately in policy and governance In this article we provide an overview of Southeast Asian peatlands assessing opportunities and challenges for greater integration of policy and governance in addressing haze climate change and other sustainability dimensions We focus on Indonesia and Malaysia the Southeast Asian countries with the largest peatland areas We summarize key developments along with evidence indicating that peatlands represent a large proportion of national GHG emissions in both Indonesia and Malaysia Further we trace the evolution of peatland policies at the national and regional levels from focusing on conservation to addressing fire and haze issues reflecting their complex relationship with national development and the corporate sector Next we highlight important and yet unrealized opportunities to better integrate carbon emissions reduction alongside fire and haze in the implementation of peatland Nature based Solutions NbS which are interventions to protect sustainably manage or restore nature Emerging financial and market instruments provide one such opportunity Additionally the creation of an enabling governance environment through peatland community participation presents an opportunity to improve the effectiveness of NbS across multiple sustainability dimensions We found that for these two key countries the most recent government reported peatland emissions appear somewhat lower than is suggested by academic studies for Indonesia and substantially lower in the case of Malaysia Further we emphasize the complex challenge of integrating policies across multiple scales and issues with international regional and national actors and in multiple industries all active in peatland governance

volume was being prepared In mid 2008 the International Energy Agency issued a report concluding that US 45 trillion would be needed over the next half century to prevent energy shortages and greenhouse gas emissions from undermining global economic growth But lest such large numbers cause us all to shrug this volume brings attention to some of the more manageable aspects of the environment and energy security challenge from addressing conflict resources such as illegal timber that contribute to corruption and regional instability to means and mechanisms to enable the diversification of energy supplies to environmental risk reduction strategies for particular installations The participants in the Hungarian Parliament building were atypical for a NATO Advanced Research Workshop
