Feigelson,G.Jogesh Babu,2012-12-06 Modern astronomy has been characterized by an enormous growth in data acquisition from new technologies in telescopes detectors and computation One can now compile catalogs of tens or hundreds of millions of stars or galaxies and databases from satellite based observations are reaching terabit proportions This wealth of data gives rise to statistical challenges not previously encountered in astronomy This book is the result of a workshop held at Pennsylvania State University in August 1991 that brought together leading astronomers and statisticians to consider statistical challenges encountered in modern astronomical research The chapters have all been thoroughly revised in the light of the discussions at the conference and some of the lively discussion is recorded here as well **Mathematical Olympiad Challenges** Titu Andreescu,Razvan Gelca,2013-12-01 Mathematical Olympiad Challenges is a rich collection of problems put together by two experienced and well known professors and coaches of the U S International Mathematical Olympiad Team Hundreds of beautiful challenging and instructive problems from algebra geometry trigonometry combinatorics and number theory were selected from numerous mathematical competitions and journals An important feature of the work is the comprehensive background material provided with each grouping of problems The problems are

clustered by topic into self contained sections with solutions provided separately All sections start with an essay discussing basic facts and one or two representative examples A list of carefully chosen problems follows and the reader is invited to take them on Additionally historical insights and asides are presented to stimulate further inquiry The emphasis throughout is on encouraging readers to move away from routine exercises and memorized algorithms toward creative solutions to open ended problems Aimed at motivated high school and beginning college students and instructors this work can be used as a text for advanced problem solving courses for self study or as a resource for teachers and students training for mathematical competitions and for teacher professional development seminars and workshops *Math Challenges, Grades 4-6* Robert W. Lagarias,2023-04-19 The 3x 1 problem or Collatz problem concerns the following seemingly innocent arithmetic procedure applied to integers If an integer x is odd then multiply by three and add one while if it is even then divide by two The 3x 1 problem asks whether starting from any positive integer repeating this procedure over and over will eventually reach the number 1 Despite its simple appearance this problem is unsolved Generalizations of the problem are known to be undecidable and the problem itself is believed to be extraordinarily difficult This book reports on what is known on this problem It consists of a collection of papers which can be read independently of each other The book begins with two introductory papers one giving an overview and current status and the second giving history and basic results on the problem These are followed by three survey papers on the problem relating it to number theory and dynamical systems to Markov chains and ergodic theory and to logic and the theory of computation The next paper presents results on probabilistic models for behavior of the iteration This is followed by a paper giving the latest computational results on the problem which verify its truth for x 5 4 cdot 10 18 The book also reprints six early papers on the problem and related questions by L Collatz J H Conway H S M Coxeter C J Everett and R K Guy each with editorial commentary The book concludes with an annotated bibliography of work on the problem up to the year 2000   *Challenges for the 21st Century* Louis H. processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses were important themes Astronomers frequently encounter troublesome situations such as heteroscedastic weighting of data unevenly spaced time series and selection effects leading to censoring and truncation Many problems were introduced at the conference in the context of large scale astronomical projects inlcuding LIGO AXAF XTE Hipparcos and digitized sky surveys This volume will be of interest to researchers and advanced students in both fields astronomers who seek exposure to recent developments in statistics and statisticians interested in confronting new problems It is edited by two faculty members of the Pennsylvania State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory monograph Astrostatics G J Babu is Professor of Statistics Fellow of the Institute of Mathematical Statistics and Associate Editor of the Journal of Statistical Planning Inference and the Journal of Nonparametric Statistics Eric D Feigelson is Professor of Astronomoy and Astrophysics *Progress and Challenges in Dynamical Systems* Santiago Ibáñez,Jesús S.
