- 1 Emphasis on Top Down Design Methodology The book introduces a top down design methodology in Chapter 3 and uses it consistently throughout the rest of the book This methodology encourages a student to think about the proper design of a program before beginning to code It emphasizes the importance of clearly defining the problem to be solved and the required inputs and outputs before any other work is begun Once the problem has been properly defined it teaches the student to employ stepwise refinement to break the task down into successively smaller sub tasks and to implement the subtasks as separate subroutines or functions Finally it teaches the importance of testing at all stages of the process both unit testing of the component routines and exhaustive testing of the final product The formal design process taught by the book may be summarized as follows
- i Clearly state the problem that you are trying to solve
- ii Define the inputs required by the program and the outputs to be produced by the program
- iii Describe the algorithm that you intend to implement in the program This step involves top down design and stepwise decomposition using pseudocode or flow charts
- iv Turn the algorithm into MATLAB statements
- v Test the MATLAB program This step includes unit testing of specific functions as well as exhaustive testing of the final program with many different data sets

- 2 Emphasis on Functions The book emphasizes the use of functions to logically decompose tasks into smaller sub tasks It teaches the advantages of functions for data hiding It also emphasizes the importance of unit testing functions before they are combined into the final program In addition the book teaches about the common mistakes made with functions and how to avoid them
