Hegazi, Jim S. Wu, 2019-11-01 This book teaches readers how to interpret read and dictate musculoskeletal MSK MRI studies through a series of very high yield MSK MRI cases The amount of knowledge needed to practice radiology can be daunting This is especially true when the radiologist has to read studies in a subspecialty outside their expertise such as MSK MRI where there are numerous disease entities complex orthopedic anatomy and many imaging considerations to navigate Learning how to read MSK MRI studies is often taught during a lengthy fellowship however many radiologists do not have this additional training but still must read MSK studies during their routine clinical practice This book fills that educational gap for practicing radiologists reading MSK MRI The cases in the book focus on the conditions that radiologists encounter most frequently in their daily clinical work making it very high yield for the amount of time needed to read it The cases are organized by the six major joints shoulder elbow wrist hand pelvis hip knee ankle foot Three additional chapters discussing tumors arthropathy and miscellaneous conditions are also included Each case begins with carefully selected high quality MRI images accompanied by a brief clinical

vignette Next a concise report as if one is dictating an official report describing the imaging findings impression and recommendations for management are provided This sample dictation offers readers direct examples of how to report their own cases There is then a discussion section which mimics teaching sessions that would occur between specialist trainees and MSK faculty members at the workstation so as to enable the readers to think like a MSK radiologist At the end of each case a Report Checklist is given to highlight important findings to consider and include in your final report Lastly we have included a section with 19 normal MSK MRI dictation templates that can be used for structured reporting This book is an ideal guide for anyone who deals with MSK MRI on a regular basis including general radiologists who have not completed a dedicated MSK radiology fellowship MSK radiologists who would want to brush up on their MSK MRI reading and reporting skills radiology fellows residents and orthopedic and sports medicine physicians and nurse practitioners *Top 3*

Tuberculosis and Nontuberculous Mycobacterial Infections David L. Schlossberg, 2020-07-10

TUBERCULOSIS AND NONTUBERCULOUS MYCOBACTERIAL INFECTIONS SEVENTH EDITION Complete coverage of every aspect of tuberculosis and related mycobacterial infections. Tuberculosis appears to be as old as humanity itself. Despite many advancements since the 1882 identification of *Mycobacterium tuberculosis* as the causative agent of tuberculosis, it remains one of the top 10 causes of death worldwide and threatens the effectiveness of our therapeutic arsenal. In 2015, 1.8 million people died of tuberculosis and almost half a million new cases of multidrug resistant tuberculosis were diagnosed. For *Tuberculosis and Nontuberculous Mycobacterial Infections*, Dr. Schlossberg assembled an international team of experts to write about nearly every facet of the prevention, diagnosis and treatment of tuberculosis and nontuberculous mycobacterial infections. In addition to presenting the latest clinical data, epidemiological findings and policy and strategy recommendations of the World Health Organization, four new chapters cover topics of critical importance: The role of therapeutic drug monitoring in mycobacterial infections; The public health issues of refugees and migrants and their exposure and transmission of tuberculosis resulting from humanitarian crises; Diabetes mellitus as a significant risk factor for tuberculosis; The increased risk of tuberculosis reactivation in people taking tumor necrosis factor alpha inhibitors and other biopharmaceuticals. Other chapters provide detailed information on the clinical, public health and policy aspects of tracking and treating tuberculosis, including: The many presentations of tuberculosis from pulmonary to ocular and cardiovascular to urogenital; The complications that tuberculosis and antituberculosis therapy cause to the hematologic and endocrine systems; Tuberculosis during pregnancy and in infants and children; Treatment of multidrug resistant tuberculosis and extensively drug resistant tuberculosis; Development of new vaccines; Nontuberculous infections caused by mycobacteria found throughout our environment.
