Diffuse Radio Foregrounds Polarisation Anomalous:

Diffuse Radio Foregrounds Matias Vidal Navarro, 2015-12-15 This extensive thesis work covers several topics including intensity and polarization focusing on a new polarization bias reduction method Vidal studied data from the WMAP satellite which is low signal to noise and as such has to be corrected for polarization bias He presents a new method for correcting the data based on knowledge of the underlying angle of polarization Using this novel method he sets upper limits for the polarization fraction of regions known to emit significant amounts of spinning dust emissions He also studies the large scale loops and filaments that dominate the synchrotron sky The dominant features are investigated including identification of several new features For the North Polar Spur a model of an expanding shell in the vicinity of the Sun is tested which appears to fit the data Implications for CMB polarization surveys are also discussed In addition Vidal presents interferometric observations of the dark cloud LDN 1780 at 31 GHz and shows that the spinning dust hypothesis can explain the radio properties observed

Questions of Modern Cosmology Mauro D'Onofrio, Carlo Burigana, 2009-07-09 Are we living in the golden age of cosmology Are we close to understanding the nature of the unknown ingredients of the currently most accepted cosmological model and the physics of the early Universe Or are we instead approaching a paradigm shift What is dark matter and does it exist How is it distributed around galaxies and clusters Is the scientific community open to alternative ideas that may prompt a new scientific revolution as the Copernican revolution did in Galileo's time Do other types of supernovae exist that can be of interest for cosmology Why have quasars never been effectively used as standard candles Can you tell us about the scientific adventure of COBE How does the extraction of the Cosmic Microwave Background anisotropy depend on the subtraction of the various astrophysical foregrounds These among many others are the astrophysical philosophical and sociological questions surrounding modern cosmology and the scientific community that Mauro D'Onofrio and Carlo Burigana pose to some of the most prominent cosmologists of our time Triggered by these questions and in the spirit of Galileo's book Dialogue Concerning the Two Chief World Systems the roughly 40 interview partners reply in the form of essays with a critical frankness not normally found in reviews monographs or textbooks
