**Motion Analysis and Image Sequence Processing** M. Ibrahim Sezan, Reginald L. Lagendijk, 2012-12-06 An image or video sequence is a series of two dimensional 2 D images sequentially ordered in time Image sequences can be acquired for instance by video motion picture X ray or acoustic cameras or they can be synthetically generated by sequentially ordering 2 D still images as in computer graphics and animation The use of image sequences in areas such as entertainment visual communications multimedia education medicine surveillance remote control and scientific research is constantly growing as the use of television and video systems are becoming more and more common The boosted interest in digital video for both consumer and professional products along with the availability of fast processors and memory at reasonable costs has been a major driving force behind this growth Before we elaborate on the two major terms

that appear in the title of this book namely motion analysis and image sequence processing we like to place them in their proper contexts within the range of possible operations that involve image sequences In this book we choose to classify these operations into three major categories namely i image sequence processing ii image sequence analysis and iii visualization The interrelationship among these three categories is pictorially described in Figure 1 below in the form of an image sequence triangle
