Embedded SoPC Design with Nios II Processor and VHDL Examples Pong P. Chu, 2011-09-26 The book is divided into four major parts. Part I covers HDL constructs and synthesis of basic digital circuits. Part II provides an overview of embedded software development with the emphasis on low level I/O access and drivers. Part III demonstrates the design and development of hardware and software for several complex I/O peripherals including PS2 keyboard and mouse, a graphic video controller, an audio codec, and an SD secure digital card. Part IV provides three case studies of the integration of hardware accelerators including a custom GCD (greatest common divisor) circuit, a Mandelbrot set fractal circuit, and an audio synthesizer based on DDFS (direct digital frequency synthesis) methodology. The book utilizes FPGA devices. Nios II soft core processor and development platform from Altera Co. which is one of the two main FPGA manufacturers. Altera has a generous university program that provides free software and discounted prototyping boards for educational institutions. Details at <http://www.altera.com/university>. The two main educational prototyping boards are known as DE1-99 and DE2-269. All experiments can be implemented and tested with these boards. A board combined with this book becomes a turn-key solution for the SoPC design experiments and projects. Most HDL and C codes in the book are device independent and can be adapted by other prototyping boards as long as a board has similar I/O configuration.

FPGA Prototyping by VHDL Examples Pong P. Chu, 2011-09-20 This book uses a learn-by-doing approach to introduce the concepts and techniques of VHDL and FPGA to designers through a series of hands-on experiments. *FPGA Prototyping by VHDL Examples* provides a collection of clear, easy-to-follow templates for quick code development, a large number of practical examples to illustrate and reinforce the concepts and design techniques, realistic projects that can be implemented and tested on a Xilinx prototyping board, and a thorough exploration of the Xilinx PicoBlaze soft core microcontroller.
