**and Perceptual Coding** H.R. Wu, K.R. Rao, 2017-12-19 The hand is quicker than the eye In many cases so is digital video Maintaining image quality in bandwidth and memory restricted environments is quickly becoming a reality as thriving research delves ever deeper into perceptual coding techniques which discard superfluous data that humans cannot process or detect Surveying the topic from a Human Visual System HVS based approach Digital Video Image Quality and Perceptual Coding outlines the principles metrics and standards associated with perceptual coding as well as the latest techniques and applications This book is divided broadly into three parts First it introduces the fundamental theory concepts principles and techniques underlying the field such as the basics of compression HVS modeling and coding artifacts associated with current well known techniques The next section focuses on picture quality assessment criteria subjective and objective methods and metrics including vision model based digital video impairment metrics testing procedures and international standards regarding image quality Finally practical applications come into focus including digital image and video coder designs based on the HVS as well as post filtering restoration error correction and concealment techniques The permeation of digital images and video throughout the world cannot be understated Nor can the importance of preserving quality while using minimal storage space and Digital Video Image Quality and Perceptual Coding provides the tools necessary to accomplish this goal Instructors and lecturers wishing to make use of this work as a textbook can download a presentation of 786 slides in PDF format organized to augment the text accompany our book H R Wu and K R Rao Digital Video Image Quality and Perceptual Coding CRC Press ISBN 0 8247 2777 0 Nov 2005 for lecturers or instructor to use for their classes if they use the book **Digital Video Concepts, Methods, and Metrics** Shahriar Akramullah, 2014-11-05 Digital Video Concepts Methods and Metrics Quality Compression Performance and Power Trade off Analysis is a concise reference for professionals in a wide range of applications and vocations It focuses on giving the reader mastery over the concepts methods and metrics of digital video coding so that readers have sufficient understanding to choose and tune coding parameters for optimum results that would suit their particular needs for quality compression speed and power The practical aspects are many

Uploading video to the Internet is only the beginning of a trend where a consumer controls video quality and speed by trading off various other factors. Open source and proprietary applications such as video e mail private party content generation editing and archiving and cloud asset management would give further control to the end user. Digital video is frequently compressed and coded for easier storage and transmission. This process involves visual quality loss due to typical data compression techniques and requires use of high performance computing systems. A careful balance between the amount of compression the visual quality loss and the coding speed is necessary to keep the total system cost down while delivering a good user experience for various video applications. At the same time power consumption optimizations are also essential to get the job done on inexpensive consumer platforms. Trade offs can be made among these factors and relevant considerations are particularly important in resource constrained low power devices. To better understand the trade offs this book discusses a comprehensive set of engineering principles strategies methods and metrics. It also exposes readers to approaches on how to differentiate and rank video coding solutions.

**Experience** Marta Mrak, Mislav Grgic, Murat Kunt, 2010-09-08 Last few years have seen rapid acceptance of high definition television (HDTV) technology around the world. This technology has been hugely successful in delivering more realistic television experience at home and accurate imaging for professional applications. Adoption of high definition continues to grow as consumers demand enhanced features and greater quality of content. Following this trend, natural evolution of visualisation technologies will be in the direction of fully realistic visual experience and highly precise imaging. However, using the content of even higher resolution and quality is not straightforward as such videos require significantly higher access bandwidth and more processing power. Therefore, methods for radical reduction of video bandwidth are crucial for realisation of high visual quality. Moreover, it is desirable to look into other ways of accessing visual content, solution to which lies in innovative schemes for content delivery and consumption. This book presents selected chapters covering technologies that will enable greater flexibility in video content representation and allow users to access content from any device and to interact with it.
