Urban Ecological Design Danilo Palazzo, Frederick R. Steiner, 2012-06-22 This trailblazing book outlines an interdisciplinary process model for urban design that has been developed and tested over time Its goal is not to explain how to design a specific city precinct or public space but to describe useful steps to approach the transformation of urban spaces Urban Ecological Design illustrates the different stages in which the process is organized using theories techniques images and case studies In essence it presents a how to method to transform the urban landscape that is thoroughly informed by theory and practice The authors note that urban design is viewed as an interface between different disciplines They describe the field as peacefully overrun invaded and occupied by city planners architects engineers and landscape architects with developers and politicians frequently joining in

They suggest that environmental concerns demand the consideration of ecology and sustainability issues in urban design. It is after all the urban designer who helps to orchestrate human relationships with other living organisms in the built environment. The overall objective of the book is to reinforce the role of the urban designer as an honest broker and promoter of design processes and as an active agent of social creativity in the production of the public realm.

Prioritizing the Environment in Urban Sustainability Planning Natasha Tang Kai, Larry Swatuk, 2023-12-01. This book examines the extent to which the environment is addressed in the sustainability plans of Canadian cities. It assesses if and to what extent select leading environmental priorities are addressed in the sustainability plans of sixteen Canadian cities followed by analysis of efforts towards each priority. It scores and ranks cities against each environmental priority and highlights what makes some cities lead and others lag in environmental sustainability. The book unravels the complexity, similarities and differences in environmental sustainability planning across major cities in Canada. The project reflects what's working, who's leading and which environmental priorities support the sustainable city model. Climate change has exacerbated the impacts of flood, droughts, wildfire and storms; urban centers must account for sustainability to mitigate and adapt to a changing and uncertain landscape. It begins with robust and integrative sustainability plans that prioritize the environment. This book will make a timely contribution to the on-going debate regarding the ways and means to become a sustainable city. It reflects the on-going sustainable development discourse and deliberations to meet the Sustainable Development Goals. It cuts across many SDGs in particular SDG 11 Sustainable Cities and Communities. What makes this study unique is its special attention to environmental priorities within urban sustainability planning. This subject is topical and would appeal to both scholars and practitioners at local, regional, national and global scales.
