**Crafting Textiles in the Digital Age** Nithikul Nimkulrat, Faith Kane, Kerry Walton, 2016-09-08 In an era of increasingly available digital resources many textile designers and makers find themselves at an interesting juncture between traditional craft processes and newer digital technologies Highly specialized craft design practitioners may now elect to make use of digital processes in their work but often choose not to abandon craft skills fundamental to their practice and aim to balance the complex connection between craft and digital processes The essays collected here consider this transition from the viewpoint of aesthetic opportunity arising in the textile designer's hands on experimentation with material and digital technologies available in the present Craft provides the foundations for thinking within the design and production of textiles and as such may provide some clues in the transition to creative and thoughtful use of current and future digital technologies Within the framework of current challenges relating to sustainable development globalization and economic constraints it is important to interrogate and question how we might go about using established and emerging technologies in textiles in a positive manner

The Fabric of Interface Stephen Monteiro, 2025-05-27 Tracing the genealogy of our physical interaction with mobile devices back to textile and needlecraft culture For many of our interactions with digital media we do not sit at a keyboard but hold a mobile device in our hands We turn and tilt and stroke and tap and through these physical interactions with an object we make things images links sites networks In The Fabric of Interface Stephen

Monteiro argues that our everyday digital practice has taken on traits common to textile and needlecraft culture. Our smart phones and tablets use some of the same skills: manual dexterity, pattern making and linking required by the handloom, the needlepoint hoop and the lap sized quilting frame. Monteiro goes on to argue that the capacity of textile metaphors to describe computing, weaving, code, threaded discussions, zipped files, software patches, switch fabrics represents deeper connections between digital communication and what has been called homecraft or women's work. Connecting networked media to practices that seem alien to media technologies, Monteiro identifies handicraft and textile techniques in the production of software and hardware and cites the punched cards that were read by a loom's rods as a primitive form of computer memory. Examining textual and visual discourses that position the digital image as a malleable fabric across its production, access and use, compares the digital labor of liking, linking and tagging to such earlier forms of collective production as quilting, bees and piecework and describes how the convergence of intimacy and handiwork at the screen interface combined with needlecraft aesthetics genders networked culture and activities in unexpected ways.

**Digital Printing of Textiles** H Ujiie, 2006-04-28 At present the textile industry produces the majority of its 34 billion square yards of printed textile fabric by screen printing. However as we move into the digital age developments in digital printing of paper are being adapted more and more for the textile market. Inkjet textile printing is growing while growth in analog textile printing remains stagnant. As digital print technologies improve offering faster production and larger cost effective print runs digital printing will grow to become the technology that provides the majority of the world's printed textiles. This comprehensive introduction to the subject is broken into five sections. After two introductory chapters it goes on to look in a number of detailed chapters at printer and print head technologies. The next section examines the printer software required for successful colour design and management. The digital printing colouration process is explored next with chapters on substrate preparation, pigmented ink, aqueous inkjet ink, pre treatment and printing on cationized cotton with reactive inks. The book is concluded with three chapters on the design and business aspect of digital printing. Digital printing of textiles contains fundamental technical explanations along with recent research and is an invaluable guide for product developers, retailers, designers and academic researchers. Provides coverage of all the current developments in digital textile printing. Covers important areas such as printer and print head technologies, printer software, digital printing colouration and design and business for digital printing.

**Design Materials and Making for Social Change** Rebecca Earley, Rosie Hornbuckle, 2023-06-01 Design Materials and Making for Social Change spans the two interconnected worlds of the material and the social at different scales and in different contexts and explores the value of the knowledge, skills and methods that emerge when design researchers work directly with materials and hold making central to their practice. Through the social entanglements of addressing material impacts the contributors to this edited volume examine homelessness, diaspora, migration, the erosion of craft skills and communities, dignity in work and family life, the impacts of colonialism, climate crisis.
