Tolbert,William W. Franko,2012-11-12 In an age when the United Nations has declared access to the Internet a human right and universal access to high speed broadband is a national goal urban areas have been largely ignored by federal policy The cost of that neglect may well be the failure to realize the social benefits of broadband and a broadly connected digital society Technology offers unparalleled advantages for innovation in urban areas in the economy health care education energy transportation government services civic engagement and more With their density and networks of activity cities hold the most potential for reaping the benefits of technology But there are surprisingly substantial disparities in broadband adoption across cities More puzzlingly rather than promoting innovation or addressing the high cost of broadband access the US has mostly funded expensive rural infrastructure in sparsely populated areas Digital Cities tells the story of information technology use and inequality in American metropolitan areas and discusses directions for change The authors argue that mobile only Internet the form used by many minorities and urban poor is a second class form of access as they offer evidence
