Aronson,2017-06-30 Innovation in information and production technologies is creating benefits and disruption profoundly altering how firms and markets perform Digital DNA provides an in depth examination of the opportunities and challenges in the fast changing global economy and lays out strategies that countries and the international community should embrace to promote robust growth while addressing the risks of this digital upheaval Wisely guiding the transformation in innovation is a major challenge for global prosperity that affects everyone Peter Cowhey and Jonathan Aronson demonstrate how the digital revolution is transforming the business models of high tech industries but also of traditional agricultural manufacturing and service sector firms The rapidity of change combines with the uncertainty of winners and losers to create political and economic tensions over how to adapt public policies to new technological and market surprises The logic of the policy trade offs confronting society and the political economy of practical decision making

is explored through three developments The rise of Cloud Computing and trans border data flows international collaboration to reduce cybersecurity risks and the consequences of different national standards of digital privacy protection The most appropriate global strategies will recognize that a significant diversity in individual national policies is inevitable However because digital technologies operate across national boundaries there is also a need for a common international baseline of policy fundamentals to facilitate quasi convergence of these national policies Cowhey and Aronson s examination of these dynamic developments lead to a measured proposal for authoritative soft rules that requires governments to create policies that achieve certain objectives but leaves the specific design to national discretion These rules should embrace mechanisms to work with expert multi stakeholder organizations to facilitate the implementation of formal agreements enhance their political legitimacy and technical expertise and build flexible learning into the governance regime The result will be greater convergence of national policies and the space for the new innovation system to flourish

Collaborative Production in the Creative Industries James Graham, Alessandro Gandini, 2017-06-29 In recent years research into creative labour and cultural work has usually addressed the politics of production in these fields but the sociotechnical and aesthetic dimensions of collaborative creative work have been somewhat overlooked This book aims to address this gap Through case studies that range from TV showrunning to independent publishing from the film industry to

social media platforms such as Tumblr and Wattpad this collection develops a critical understanding of the integral role collaboration plays in contemporary media and culture It draws attention to diverse kinds of creative collaboration afforded via the intermediation of digital platforms and networked publics It considers how these are incorporated into emergent market paradigms and investigates the complicated forms of subjectivity that develop as a consequence But it also acknowledges historical continuities not least in terms of the continued exploitation of support personnel and of resulting artistic conflicts but also of alternative models that resist the precarious nature of contemporary cultural work Finally this volume attempts to situate creative collaboration in broader social and economic contexts where the experience and outcomes of such work have proved more problematic than the rich potential of their promise would lead us to expect

Openness to Creative Destruction Arthur M. Diamond, 2019 Life improves under the economic system often called entrepreneurial capitalism or creative destruction but more accurately called innovative dynamism Openness to Creative Destruction Sustaining Innovative Dynamism shows how innovation occurs through the efforts of inventors and innovative entrepreneurs how workers on balance benefit and how good policies can encourage innovation The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches Arthur M Diamond Jr shows how economies grow where innovative dynamism through leapfrog competition flourishes as in the United States from roughly 1830 1930 Consumers vote with their feet for innovative new goods and for process innovations that reduce prices benefiting ordinary citizens more than the privileged elites Diamond highlights that because breakthrough inventions are costly and difficult patents can be fair rewards for invention and can provide funding to enable future inventions He argues that some fears about adverse effects on labor market are unjustified since more and better new jobs are created than are destroyed and that other fears can be mitigated by better policies The steady growth in regulations often defended on the basis of the precautionary principle increases the costs to potential entrepreneurs and thus reduces innovation The Great Fact of economic history is that after at least 40 000 years of mostly poor nasty brutish and short humans in the last 250

years have started to live substantially longer and better lives Diamond increases understanding of why
