Educational imaginaries Lina Rahm,2019-01-23 This thesis makes use of a genealogical approach to map out and explain how and why computers and citizenship have become so closely connected It examines the historical continuities and disruptions and the role that popular education has played in this interrelation Drawing on previous research in the overlap between Swedish popular education history and historical computer politics this thesis adds knowledge about how imaginaries of popular education operating as silver bullet solutions to problems with computerization have had important functions as governing tools for at least 70 years That is Swedish popular education

has since the 1950s been imagined as a central solution to problems with computerization but also to realize the societal potentials associated with computers. Specifically, this thesis makes two contributions: 1. Empirically, the thesis uncovers archived and in many ways forgotten discourses around the historical enactment of the digital citizen and the role of popular education, questioning assumptions that are taken for granted in current times. 2. Theoretically, the thesis proposes a conceptual model of educational imaginaries and specifically introduces the notion and method of problematizations into these imaginaries. Denna avhandling använder sig av ett genealogiskt tillvägagångssätt för att kartlägga och förklara hur och varför datorer och medborgarskap har kommit att bli så tätt sammankopplade och vilken funktion folkbildning har och har haft i denna relation. Avhandlingen undersöker historiska kontinuiteter och avbrott i perioden från 1950-talet till 2010-talet. Genom att bygga vidare på tidigare forskning i överlappningen mellan svensk folkbildningshistoria och historisk datapolitik bidrar avhandlingen med kunskap om hur folkbildning och föreställningar om folkbildning fungerat som en historisk och nutida universallösning dels för att skapa förutsedda problem med datorisering men också för att realisera samhällsliga förhoppningar förknippade med den samma. Avhandlingens bidrag är dubbelt: 1. Empiriskt lyfter avhandlingen fram arkiverade och på många sätt bortglömda diskurser och folkbildningssatsningar kring datorisering och medborgarskap samt visar dess relevans för nutida föreställningar om den digitala medborgaren. 2. Teoretiskt förklarar avhandlingen en konceptuell modell över framtidsföreställningar kring utbildning samt introducerar specifikt begreppet och metoden problematisering i dessa föreställningar.
