Introduction

Cerberus Pyrotronics ILP-1 and ILPT-1 intelligent photoelectric smoke detectors offer the fire and life safety industry the most advanced method of detection, programming and communications available today. Additionally, the ILP series detectors provide an extremely high degree of resistance to RFI, EMI and humidity. The ILP Series photoelectric detector utilizes a state-of-the-art Motorola microprocessor with on-board EEPROM. The microprocessor provides the power to operate the detector's sophisticated detection, error checking and supervision algorithms.

The ILP Series intelligent photoelectric detectors are compatible with Cerberus Pyrotronics SensorLINK FPI-32 field programmer/tester. The FPI-32 is a compact, portable, menu-driven accessory which makes programming and testing detectors faster, easier and more reliable than other methods. The FPI-32 eliminates the need for cumbersome,

unreliable mechanical programming methods and reduces installation and service costs by electronically programming addresses and functionally testing the ILP's performance before the detector is installed.

The ILP Series photoelectric detectors are also compatible with Cerberus Pyrotronics IXL, MXL and XL3 control panels.

All ILP Series detectors are Underwriters Laboratories Listed.
