## Carburetion Troubleshooting Detail Reference Guide

<b>A</b>	
<b>Air Cleaner, Restricted:</b>	Problems involving the air cleaner itself are normally related to loose mounting screws and/or damaged or leaking gaskets. A leaking gasket allows unfiltered air to enter the intake system. Symptoms, based on severity of the leak, can range from an overly lean condition where the engine will have trouble accepting or handling load to the engine won't start or run at all. See Blocking Plunge Gasket.
<b>Air Cleaner, Restricted:</b>	Restricted air filter elements affect engine operation differently based on the carburetor venting system. The mixture for internally vented carburetors typically becomes lean while the fuel mix for externally vented carburetors becomes overly rich. Based on the carburetor design, effects can range from an engine that loads up and runs overly rich to an engine that can't handle a load because there is not enough fuel available.
<b>Air Intake, Restricted:</b>	See A/C, restricted.
<b>Automatic Choke</b>	The automatic choke function of the Pulse-Jet carburetor used on vertical crankshaft four-cylinder style engines can cause an overly rich condition during starting and operation. The default choke position is on. If the diaphragm drifts over time, it will not allow the choke plate to open smoothly and the choke can stay on longer than it should. If the diaphragm has a hole at the link or through the material, the choke will not disengage as it should. A small vacuum metering jet into the diaphragm spring cavity can become plugged, defeating the choke pull off.
