Cardiac Vascular Remodeling And Functional Interaction:

Cardiac-Vascular Remodeling and Functional Interaction Yukio Maruyama, Masatsugu Hori, Joseph S. Janicki, 2013-04-17 Cardiac performance is regulated not only by cardiac muscle properties but also by several other factors including those associated with the neurohumoral system and the mechanical characteristics of the peripheral circulation. New information concerning these regulatory factors has furthered our understanding of the pathophysiology of cardiac dysfunction. However, controversy remains along with a need to integrate these multidisciplinary findings. It was with this in mind together with my continuing interest in the response of the normal and diseased heart to variations in loading conditions that the satellite symposium entitled Interactions Between Cardiac Function and Vascular Dynamics was organized and dedicated to my mentor Dr T Takishima. The symposium was held in Fukushima, Japan in 1992 following the Tenth International Conference of the Cardiovascular Systems Dynamics Society in Kobe, Japan which was organized by the then president of the society Dr Masatsugu Hori. The Fukushima symposium and the Kobe conference were stimulating and informative. To commemorate these events Dr Hori, Dr Janicki and I decided to publish this book. It covers topics that were presented then as well as pertinent new material. As a result, the book includes not only updated reviews but also up-to-date findings that were not considered at the two scientific sessions. The high level attained in this book is due to the outstanding contributions from internationally renowned scientists. This final product of their efforts should prove to be a valuable source of information to the reader.

Aging and the Heart José Marín-García, 2007-12-07 In this book the genetic and molecular basis of cardiovascular aging is examined in detail and a comprehensive assessment given of the bioenergetics changes occurring in human and animal models of cardiac aging. Both current diagnostic and future therapeutic modalities are presented giving this book a dual-pronged approach. Cardiac aging like aging in general is a complex process involving numerous cellular and molecular changes. This book sheds new light on the phenomenon.

Delayed Preconditioning and Adaptive Cardioprotection G.F. Baxter, Derek M. Yellon, 2012-12-06 Interest in the ability of myocardium to adapt to ischaemic stress has continued to grow since the discovery of ischaemic preconditioning in 1986. In 1993 two reports heralded the recognition of a delayed preconditioning response in the heart now commonly known as the second window of protection. Since then a number of studies have described the ability of delayed preconditioning and related adaptive phenomena to protect against a variety of pathologies in the ischaemic and reperfused myocardium. Our understanding of the cellular mechanisms of sub-acute adaptive cardioprotection has advanced considerably during this period. This compilation of state-of-the-art reviews by those who have

made significant contributions to this field provides detailed and critical analysis of this research from molecular basis to potential clinical relevance The book aims to provide an authoritative comprehensive and thoroughly up to date overview for scientists and clinicians engaged in or observing this rapidly developing area of heart research It will also be of interest to those engaged in research on other tissues where ischaemia reperfusion pathology is of major concern

Neuropsychology and Cardiovascular Disease Ronald A. Cohen,John Gunstad,2010 Roughly one of every three Americans has some form of cardiovascular disease CVD including more than 70% of persons older than 75 years of age Long associated with increased risk for mortality and disability CVD is also a major risk factor for stroke and cerebrovascular disease There has been growing consensus that CVD is also an important contributor to poor neurocognitive outcome in own right Numerous studies now link CVD to accelerated cognitive decline and structural and functional brain abnormalities including neurodegenerative conditions in the elderly While vascular dementia is the most obvious example of severe brain dysfunction directly tied to chronic vascular disease evidence is also mounting that Alzheimer s disease may be linked to some of the same pathophysiological mechanisms that underlie cardiovascular disease This book was written to provide up to date insight into these heart brain connections and the neuropsychology of CVD Highlights include Controversies in vascular dementia and vascular cognitive impairment VCI Effects of aging on cerebral hemodynamics and autoregulation How blood vessel function contributes to cognitive decline Updates on the cognitive impact of cardiosurgical procedures Neurocognitive aspects of heart failure Neuropsychological evaluation of persons with CVD Mechanisms by which neurological changes produce cardiac dysfunction Recent findings in the structural and functional neuroimaging in CVD Both clinicians and researchers in neuropsychology health psychology cardiology neurology psychiatry geriatrics and many others will find this book an important resource
