Rashid Seyal, Rashid A. Seyal, 2006 The pathological behavior of a modern man is indebted to the complexity of various environmental encounters acting as unspoken disconcerting even trivial events of day to day life Each one of us is exposed to such psychic and socio cultural strains which are inherent in the particular environments and will sooner or later succumb to the need to fidget and to perform small trivial acts displaced from usual functional context and injected into quite alien behavior sequences in an attempt to avoid behavioral stalemates of contradictory urges It was surprising when somebody had said such and such garments make me uneasy and sick or I feel completely relaxed with certain blend of Garments We wanted to make sure if these influences have lasting maturational influences on the body systems Because an overload of stress which may arrive as a big chunk or in a series of small bits may be a Physical source of insult i e accidental trauma malnutrition disturbed sleep or Psychological i e disturbed family life loss of a job personal insecurity etc But the more appropriate definition of a stressor is given in the most recent literature A stressor could be an environmental source in more scientific words Extroceptive i e natural calamities chronic occupational stress over crowding territorial conflicts imposition of stressful behavioral task etc This could also be a naturally evoked Agonistic behavioral response such as resulting from confrontation with an attacking animal or an on rushing car But the more complex behavioral response of an individual is observed in response to activation of the cutaneous receptors due to Noxious or Nociceptive Stress Initially only painful stimuli were attributed to have such influences But later scientists used loud noise and noxious cold stimulation and produced similar behavioral responses Our experience with the Synthetic Blend of Garments showed similar behavioral reactions We wanted to confirm the local static thermal and mechanical influences instigated due poor sweat absorption of the Synthetic Blend of Garments could really produce nociceptive type of behavioral responses **Nurse Anesthesia**
