Car Troubles Transport And Society:

Car Troubles Jim Conley, 2016-04-15 *Car Troubles* central premise is that the car as the dominant mode of travel needs to be problematized. It examines a wide range of issues that are central to automobility by situating it within social economic and political contexts and by combining social theory specific case studies and policy oriented analysis. With an international team of contributors the book provides a coherent and comprehensive analysis of the global phenomenon of automobility from the Anglo world to the cases in China and Chile and all the elements that relate to it. **Car Troubles** Jim

Conley, Arlene Tigar McLaren, 2009 *Car Troubles* examines a wide range of issues that are central to automobility by situating it within social economic and political contexts and by combining social theory specific case studies and policy oriented analysis. It examines obstacles to change and considers the possibility of alternatives that go beyond the car. *Mobilities and Foucault* Katharina Manderscheid, Tim Schwanen, David Tyfield, 2017-10-02 Although Foucault's work has been employed and embraced enthusiastically by some mobilities scholars discussion across these two traditions to date has mostly been partial and unsystematic. Yet Foucault's work can make critical contributions for example to thinking about governing mobilities in contemporary societies while conversely mobilities research opens up new perspectives on Foucault. In combination these bodies of work can illuminate issues as diverse as the greater interdependencies between mobility systems e.g. transport tourism trade internet use the proliferation of the undesired mobilities of viruses of natural phenomena like fire of what is taken to be criminality and other seemingly inevitable by products of globalisation the perceived threats to desirable forms of mobility as constituted by climate change peak oil and energy security and terrorism and warfare and the increased popularity of logics of governance premised on choice responsabilisation and the re coding of phenomena in economic terms under neo liberalism. Against this background this book brings together the first major collection of contributions from across the social sciences with a shared interest in both mobilities and Foucauldian thinking. This book was published as a special issue of *Mobilities*. **The Routledge Handbook of Mobilities** Peter Adey, David Bissell, Kevin Hannam, Peter Merriman, Mimi Sheller, 2014-01-10

The 21st century seems to be on the move perhaps even more so than the last. With cheap travel and more than two billion cars projected worldwide for 2030. And yet all this mobility is happening incredibly unevenly at different paces and intensities with varying impacts and consequences to the extent that life on the move might be actually quite difficult to sustain environmentally socially and ethically. As a result mobility has become a keyword of the social sciences delineating a new domain of concepts approaches methodologies and techniques which seek to understand the character and quality of these trends. This Handbook explores and critically evaluates the debates approaches controversies and methodologies inherent to this rapidly expanding discipline. It brings together leading specialists from range of backgrounds and geographical regions to provide an authoritative and comprehensive overview of this field conveying cutting edge research in an accessible way whilst giving detailed grounding in the evolution of past

debates on mobilities It illustrates disciplinary trends and pathways from migration studies and transport history to communications research featuring methodological innovations and developments and conceptual histories from feminist theory to tourist studies It explores the dominant figures of mobility from children to soldiers and the mobility impaired the disparate materialities of mobility such as flows of water and waste to the vectors of viruses key infrastructures such as logistics systems to the informal services of megacity slums and the important mobility events around which our world turns from going on vacation to the commute to the catastrophic disruption of mobility systems The text is forward thinking projecting the future of mobilities as they might be lived transformed and studied and possibly brought to an end International in focus the book transcends disciplinary and national boundaries to explore mobilities as they are understood from different perspectives different fields countries and standpoints This is an invaluable resource for all those with an interest in mobility across disciplinary boundaries and areas of study

The Journal of the Society of Automotive Engineers Society of Automotive Engineers,1921 **Motor Transport** ,1927 Climate Change and Society John Urry,2011-06-20 This book explores the significance of human behaviour to understanding the causes and impacts of changing climates and to assessing varied ways of responding to such changes So far the discipline that has represented and modelled such human behaviour is economics By contrast Climate Change and Society tries to place the social at the heart of both the analysis of climates and of the assessment of alternative futures It demonstrates the importance of social practices organised into systems In the fateful twentieth century various interlocking high carbon systems were established This sedimented high carbon social practices engendering huge population growth increasing greenhouse gas emissions and the potentially declining availability of oil that made this world go round Especially important in stabilising this pattern was the carbon military industrial complex around the world The book goes on to examine how in this new century it is systems that have to change to move from growing high carbon systems to those that are low carbon Many suggestions are made as to how to innovate such low carbon systems It is shown that such a transition has to happen fast so as to create positive feedbacks of each low carbon system upon each other Various scenarios are elaborated of differing futures for the middle of this century futures that all contain significant costs for the scale extent and richness of social life Climate Change and Society thus attempts to replace economics with sociology as the dominant discipline in climate change analysis Sociology has spent much time examining the nature of modern societies of modernity but mostly failed to analyse the carbon resource base of such societies This book seeks to remedy that failing It should appeal to teachers and students in sociology economics environmental studies geography planning politics and science studies as well as to the public concerned with the long term future of carbon and society

Community-Owned Transport Leigh Glover,2016-11-03 City and state governments around the world are struggling to achieve environmentally sustainable transport Economic technological city and transport planning and human behaviour solutions are often hampered by ineffective implementation So attention is now turning to

institutional governmental and political barriers Approaches to these implementation problems assume that transport ownership can only be public owned by state entities or private corporate or personal Another option largely unexplored to date is communal ownership of transport Community Owned Transport proposes and develops the notion that communal ownership has a historical basis and provides unique opportunities for providing personal mobility It looks at the historical roots of modern urban transport s failings as those of technological change and the associated governing of transport systems particularly the role of public sector institutions Community ownership is explored through the new sharing economy developments car sharing ridesharing and bicycle share schemes and older social innovations in ecovillages and communal living Models and practices of community ownership of transport are provided and this study also discusses how community ownership might contribute to sustainable transport Drawing widely on different disciplines and fields of scholarship this book explores the conceptual and practical aspects of communal ownership of transport It will be a valuable resource for those seeking innovative approaches to addressing the pressing problems of transport including graduate and postgraduate students as well as policymakers practitioners and community groups

Erling Holden,2016-03-16 Sustainable mobility has become the new imperative for transport policy There have been a number of policy attempts at sustainable mobility globally such as the development of more efficient conventional transport technologies the promotion of efficient and affordable public transport systems and the encouragement of environmental awareness Such policies have so often been presented as prerequisites for sustainable mobility that they are now taken for granted But are any of these policies really successful To what extent do they actually contribute or fail to contribute to sustainable mobility Why do some policies succeed and others fail Using an interdisciplinary approach which brings together various theories and methodologies this book tests each of these policies or hypotheses as the author sees them with detailed empirical investigations It also argues that leisure time travel should be included in any sustainable mobility policies as it now accounts for 50 per cent of all annual travel distance in developed countries The book concludes by suggesting fourteen theses of sustainable mobility for the EU and a new model for future best practice **Transport, Mobility, and the**

Production of Urban Space Julie Cidell,David Prytherch,2015-05-01 The contemporary urban experience is defined by flow and structured by circulating people objects and energy Geographers have long provided key insights into transportation systems But today concerns for social justice and sustainability motivate new critical approaches to mobilities Reimagining the city prompts an important question How best to rethink urban geographies of transport and mobility This original book explores connections in theory and practice between transport geographies and new mobilities in the production of urban space It provides a broad introduction to intersecting perspectives of urban geography transport geography and mobilities
