Carbon Sequestration In Urban Ecosystems:

Carbon Sequestration in Urban Ecosystems Rattan Lal, Bruce Augustin, 2011-12-09 Urbanization drastically alters the ecosystems structure and functions disrupts cycling of C and other elements along with water It alters the energy balance and influences climate at local regional and global scales In 2008 urban population exceeded the rural population In 2050 70% of the world population will live in urban centers The number of megacities 10 million inhabitants increased from three in 1975 to 19 in 2007 and is projected to be 27 in 2025 Rapid urbanization is altering the ecosystem C budget Yet urban ecosystems have a large C sink capacity in soils and biota Judicious planning and effective management can enhance C pool in urban ecosystems and off set some of the anthropogenic emissions Principal components with regards to C sequestration include home lawns and turfs urban forests green roofs park and recreational sports facilities and urban agriculture

Soils in Urban Ecosystem Amitava Rakshit, Subhadip Ghosh, Viacheslav Vasenev, H. Pathak, Vishnu D. Rajput, 2022-04-13 This book is a compilation of latest work in the field of urban soil management It explores the global status of urban soils and puts forwards methods for sustainable utilization of urban soils and green spaces Urban soil study is a new frontier of soil science Urban soils research is challenging due to complexity of classification spatial temporal variability exposure to pollution and the predominant effect of the anthropogenic factor on soil formation Management of urban soils and green spaces is an important aspect for developing sustainable spaces This is a comprehensive collection of information for the students researchers landscape architects understanding and maximizing the benefits of soils in urban ecosystems *Urban Ecosystems* Frederick R. Adler, Colby J. Tanner, 2013-04-25 As humans have come to dominate the earth the ideal of studying and teaching ecology in pristine ecosystems has become impossible to achieve Our planet is now a mosaic of ecosystems ranging from the relatively undisturbed to the completely built with the majority of people living in urban environments This accessible introduction to the principles of urban ecology provides students with the tools they need to understand these increasingly important urban ecosystems It builds upon the themes of habitat modification and resource use to demonstrate how multiple ecological processes interact in cities and how human activity initiates chains of unpredictable unintended ecological consequences Broad principles are supported throughout by detailed examples from around the world and a comprehensive list of readings from the primary literature Questions exercises and laboratories at the end of each chapter encourage discussion hands on study active learning and engagement with the world outside the classroom window The Palgrave Encyclopedia of Urban and Regional Futures Robert C. Brears, 2023-01-13 While urban settlements are the drivers of the global economy and centres of learning culture and innovation and nations rely on competitive dynamic regions for their economic social and environmental objectives urban centres and regions face a myriad of challenges that impact the ways in which people live and work create wealth and interact and connect with places Rapid urbanisation is resulting in urban sprawl rising emissions urban poverty and high unemployment rates housing affordability issues lack of urban

investment low urban financial and governance capacities rising inequality and urban crimes environmental degradation increasing vulnerability to natural disasters and so forth At the regional level low employment low wage growth scarce financial resources climate change waste and pollution and rising urban peri urban competition etc are impacting the ability of regions to meet socio economic development goals while protecting biodiversity The response to these challenges has typically been the application of inadequate or piecemeal solutions often as a result of fragmented decision making and competing priorities with numerous economic environmental and social consequences In response there is a growing movement towards viewing cities and regions as complex and sociotechnical in nature with people and communities interacting with one another and with objects such as roads buildings transport links etc within a range of urban and regional settings or contexts This comprehensive MRW will provide readers with expert interdisciplinary knowledge on how urban centres and regions in locations of varying climates lifestyles income levels and stages development are creating synergies and reducing trade offs in the development of resilient resource efficient environmentally friendly liveable socially equitable integrated and technology enabled centres and regions Urban Ecosystems Robert A. Francis, Michael A. Chadwick, 2013 With over half of the global human population living in urban regions urban ecosystems may now represent the contemporary and future human environment This book aims to review what is currently known about urban ecosystems in a short and approachable text that will serve as a key resource for teaching and learning related to the urban environment

agriculture and environmental sciences *Urban Ecology* Pramit Verma, Pardeep Singh, Rishikesh Singh, A. S. Raghubanshi, 2020-07-14 Urban Ecology covers the latest theoretical and applied concepts in urban ecological research. This book covers the key environmental issues of urban ecosystems as well as the human-centric issues, particularly those of governance, economics, sociology, and human health. The goal of Urban Ecology is to challenge readers' thinking around urban ecology from a resource-based approach to a holistic and applied field for sustainable development. There are seven major themes of the book: emerging urban concepts and urbanization, land use, land cover change, urban social ecological systems, urban environment, urban material balance, smart healthy and sustainable cities, and sustainable urban design. Within each section, key concepts such as monitoring the urbanization phenomena, land use cover, urban soil fluxes, urban metabolism, pollution, and human health and sustainable cities are covered. Urban Ecology serves as a comprehensive and advanced book for students, researchers, practitioners, and policymakers in urban ecology and urban environmental research, planning, and practice. Includes global case studies from over 14 countries, providing a first-hand account of recent applications. Covers the phenomena of sustainable transport, nutrient recovery, and human health among many others. Examines environmental issues as well as social ecological systems and governance.

Recarbonizing global soils - A technical manual of recommended management practices Food and Agriculture Organization of the United Nations, Intergovernmental Technical Panel on Soils, 2021-09-08 During the last decades, soil organic carbon (SOC) attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system, which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals, in particular Goal 15: Protect, restore, and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss, with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments, including the advantages, drawbacks, and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts, supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 5 includes 24 practices that have a direct impact on SOC sequestration and maintenance in forestry, wetlands, and urban soils.

Dynamics of Land Use and Carbon Emissions in the Context of Carbon Neutrality and Carbon Peaking Chenxi Li, Ayyoob Sharifi, Bao-Jie He, Zhiheng Yang, 2025-01-16 The objective of achieving carbon neutrality serves as a crucial guiding principle in addressing the global issue of climate change and fostering sustainable economic growth and ecological harmony. Carbon emissions from land use account for 10% of the total global carbon emissions. It is an important carbon source and sink of the earth system. Therefore, optimizing the land spatial pattern is one of the important means to

promote carbon neutralization In 1997 Kyoto Protocol emphasized that countries could improve carbon sink capacity reduce carbon emissions and practice climate governance through afforestation forest management and farmland management In this context countries worldwide should actively optimize the land spatial pattern enhance the carbon sink capacity of terrestrial ecosystems and build a low carbon land use structure and land spatial pattern system There are mainly four types of territorial space conflicts The first is the conflict of development space which is a vicious expansion of urban space caused by excessive dependence on GDP The second is the conflict of land use space which is mainly reflected in the overlapping contradiction between cultivated land space and ecologically fragile space The third is the conflict caused by the disharmony of element space The fourth is the conflict of planning space characterized by the contradiction between ecological and construction spaces According to the IPCC report on the relationship between climate change and land the management mode of natural resources the transformation of space use and the improper allocation of factors will cause carbon sink profits and losses On the one hand land use carbon emissions may be the effect of land use control on the other hand it may also be caused by man made carbon emissions

Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience
