*Carbonate Facies in Geologic History* J.L. Wilson, 2011-12-08 Since 1950 geologists have learned more about the origin and lithification of carbonate sediments than in all the previous years of the history of science This is true in all the diverse fields of carbonate geology the study of Recent environments marine zoology and botany organic geochemistry trace element and isotope geochemistry mineralogy microfacies of depositional environments and trace fossil and sedimentary structure investigation A synthesis of this new knowledge is just beginning to be formulated The purpose of this volume is to introduce the advanced student and petroleum explorationist principally to one important aspect of this study to some of the principles of carbonate geology which may serve to interpret the depositional environments of ancient strata and to better define their sequences and patterns Chapter I is a brief review of principles of carbonate sedimentation For a full discussion of the mineralogy geochemistry and diagenesis of carbonates along with a review of Holocene sediments one may refer to Bathurst's 1971 and Milliman's 1974 texts Chapter II reviews stratigraphic and paleotectonic concepts and discusses a general model for carbonate deposition Chapter III offers an outline of carbonate petrography concentrating on lithologic description for the purposes of environmental interpretation For a further review of this subject and excellent photomicrographs Horowitz and Potter 1971 and Majewske 1969 may be used *Carbonate Facies in Geological History* James L. **Stratigraphy of North America** W.J. Frazier, D.R. Schwimmer, 2013-11-11 An early reviewer of this book stated that he had difficulty assessing its marketability because it falls between the cracks of geological literature We have designed this book to meet a need of modern geology namely a single source providing both detailed and synoptic stratigraphy of the various regions of North America through geological time Shortly after beginning work on such a book we realized why it had not yet been written it required six years of effort assimilation of an incredible amount of information and two years additional work to cut the volume down to publishable size Further by the time the final chapter was written the first few were already out of date Nevertheless the book lies in front of you It is intended to serve several purposes As a textbook it will serve the following courses Regional stratigraphy Sedimentary tectonics Regional tectonics Advanced historical geology Survey level paleontology Obviously not all portions of the book are relevant to all of the above courses We assume the reader will retain this book after the particular course is done and will use it as a reference book Hopefully others will obtain the book solely for reference purposes We believe it will be especially useful for the working geologist or academic geologist seeking generalized and some moderately detailed information about a region or geological time interval which is unfamiliar

M. Funnell, 2004-03-25 The positions of global paleoshorelines through the Mesozoic and Cenozoic are presented within this atlas This is a unique global compilation

that presents the first attempt at delineating global shorelines at stage level The information sources are set out in a bibliography numbering more than 2000 primary paleographic references

**Sedimentary Dynamics of Windfield-Source-Basin System** Zaixing Jiang,2018-03-06 This book introduces the geological concept of the windfield source basin system based on integrated modern and ancient sedimentology studies It identifies wind field as a main sedimentation controlling factor that combines with provenance and basin dynamics to determine the formation and distribution of depositional systems Using the unary properties of facies sedimentary models and the duality properties of source to sink approaches the concept of a wind source basin system introduces the sedimentary system trinity wind field provenance and basin properties Wind source basin systems provide more plausible genetic interpretations of depositional systems including both continental and marine facies and clastic and carbonate systems as well as more comprehensive and precise predictions of depositional systems hydrocarbon reservoirs in unknown regions Further the book proposes a series of methods on paleowind field reconstruction which fill the gaps in paleo atmospheric field studies in paleoclimatology and shows that allocating relationships among source reservoir cap in petroliferous basins are limited by the wind source basin system This trinity system also provides a new perspective on petroleum geology assessment The book appeals to all those engaged in sedimentology petroleum geology and climatology studies Compte rendu ,1985 **Geoscience**
