*Carbonomics* Steven Stoft, 2014      Economic Choices in a Warming World Christian de Perthuis, 2011-03-10 A provocative work that urges governments and policymakers to concentrate on existing policies and tools for combating climate change

*Reconceptualising the Rule of Law in Global Governance, Resources, Investment and Trade* Photini Pazartzis, Maria Gavouneli, 2016-06-30 The relevance and importance of the rule of law to the international legal order cannot be doubted and was recently reaffirmed by the Declaration of the High level Meeting of the General Assembly on the Rule of Law at the National and International Level's solemn commitment to it on behalf of states and international organizations In this edited collection leading scholars and practitioners from the fields of global governance resources investment and trade examine how the commitment to the rule of law manifests itself in the respective fields The book looks at cutting edge issues within each field and examines the questions arising from the interplay between them With a clear three part structure it explores each area in detail and addresses contemporary challenges while trying to assure a commitment to the rule of law The contributions also consider how the rule of law has been or should be reconceptualised Taking a multi disciplinary approach the book will appeal to international lawyers from across the spectrum including practitioners in the field of international investment and trade law

Generating Electricity in a Carbon-Constrained World Fereidoon Sioshansi, 2009-10-21 The electric power sector is what keeps modern economies going and historically fossil fuels provided the bulk of the energy need to generate electricity with coal a dominant player in many parts of the world Now with growing concerns about global climate change this historical dependence on fossil fuels especially those rich in carbon are being questioned Examining the implications of the industry's future in a carbon constrained world a distinct reality is the subject of this book Containing contributions from renowned scholars and academics from around the world this book explores the various energy production options available to power companies in a carbon constrained world The three part treatment starts with a clear and rigorous exposition of the short term options including Clean Coal and Carbon Capture and Sequestration Technology Coal and Emission trading Renewable energy options such as Nuclear Energy Wind power Solar power Hydro electric and Geothermal energy are clearly explained along with their trade offs and uncertainties inherent in evaluating and choosing different energy options and provides a framework for assessing policy solutions This is followed by self contained chapters of case studies from all over the world Other topics discussed in the book are Creating markets for tradable permits in the emerging carbon era Global Action on Climate Change The Impossibility of Staunching World CO2 Emissions and Energy efficiency Clearly explains short term and long term options Contributions from renowned scholars and academics from around the world Case studies from all over the world

*The Global Carbon Crisis* Timo Busch, Paul Shrivastava, 2017-09-08 For at least a decade the science of climate change has warned us of the dire need for action particularly by corporations who are the main engines of economic production and consumption Yet managerial and

corporate understanding of climate change and related energy issues remains fragmented and present actions lack the urgency this critical problem deserves There is a whole new economy the low carbon economy looming on the horizon But our consumption and production patterns remain in a carbon locked position What we are risking is a global carbon crisis and a case of history repeating Humankind's failure to adequately recognise the onset of and address the effects of the global financial crisis mirrors our similar failures with the carbon crisis There are many parallels both are and were predictable and both will have direct implications on humanity on a sweeping indiscriminate and severe scale The difference is that we cannot reverse the effects of climate change and fossil fuel scarcity as easily as we can repair the global financial system It is of paramount importance that we wake up to the risks and begin tackling the issues early enough To successfully address the risks business needs to be aware of the consequences that a changing climate and finite carbon resources will have on their business performance The element carbon both as a resource and as an emission is both an economic threat as well as an opportunity for companies It is a threat for carbon intense production systems that will need to be changed to avoid further harmful climatic change and take into account the limited availability of carbon based fuels At the same time new opportunities will emerge for companies who can creatively design and produce goods and services that fit the new emerging carbon constrained business environment Many sectors of the economy for example renewable energy energy and resources conservation waste reduction and management carbon finance markets will expand rapidly as other carbon and resource intensive sectors decline The Global Carbon Crisis succinctly translates important insights from the natural sciences economics and equity discussions for the business reader It reviews important aspects of these discussions and clarifies misunderstandings with respect to climate change and fossil fuel availability and their implications for business The book provides simple direct pragmatic and effective solutions that policy makers and corporate managers can implement The aim is to provoke action thoughtful action towards developing a low carbon future for companies on three levels At the macro level the authors discuss the importance of tough industrial policies for climate change and propose the idea of an international carbon equal fund At the meso level they elaborate on the role of inter firm collaborations for establishing low carbon industries and production systems At the micro level they illustrate the virtue of proactive carbon strategies and suggest a corporate carbon management framework Getting the message of the carbon crisis across to a business audience has proved challenging This book successfully makes the case that they are intricately connected to one another and practising managers and business students will benefit from viewing the carbon crisis in parallel to the financial meltdown The book will be essential reading for all businesses grappling with carbon related issues and for many in academia including those in management strategy finance corporate social responsibility and sustainable development globalisation and innovation studies

*Tourism and Oil* Susanne Becken, 2015 This book is the first to examine oil constraints and tourism and addresses one of the key challenges for the tourism industry in the future It provides an estimate of how much oil tourism

consumes globally and summarises state of the art information on oil resources oil data and public discourse The volume also offers an analysis of the economic implications of increasing oil prices for tourism and discusses key dimensions relevant for tourism in a post peak oil world It will be useful for tourism stakeholders globally postgraduate students in tourism and resource management ecological economists and those researching issues of resource efficiency carrying capacity and global environmental change

Environmental Law and Economics Klaus Mathis, Bruce R. Huber, 2017-04-07 This anthology discusses important issues surrounding environmental law and economics and provides an in depth analysis of its use in legislation regulation and legal adjudication from a neoclassical and behavioural law and economics perspective Environmental issues raise a vast range of legal questions to what extent is it justifiable to rely on markets and continued technological innovation especially as it relates to present exploitation of scarce resources Or is it necessary for the state to intervene Regulatory instruments are available to create and maintain a more sustainable society command and control regulations restraints Pigovian taxes emission certificates nudging policies etc If regulation in a certain legal field is necessary which policies and methods will most effectively spur sustainable consumption and production in order to protect the environment while mitigating any potential negative impact on economic development Since the related problems are often caused by scarcity of resources economic analysis of law can offer remarkable insights for their resolution Part I underlines the foundations of environmental law and economics Part II analyses the effectiveness of economic instruments and regulations in environmental law Part III is dedicated to the problems of climate change Finally Part IV focuses on tort and criminal law The twenty one chapters in this volume deliver insights into the multifaceted debate surrounding the use of economic instruments in environmental regulation in Europe

*Global Carbon Pricing* Peter Cramton, David JC MacKay, Axel Ockenfels, Steven Stoft, 2017-06-16 Why the traditional pledge and review climate agreements have failed and how carbon pricing based on trust and reciprocity could succeed After twenty five years of failure climate negotiations continue to use a pledge and review approach countries pledge almost anything subject to unenforced review This approach ignores everything we know about human cooperation In this book leading economists describe an alternate model for climate agreements drawing on the work of the late Nobel laureate Elinor Ostrom and others They show that a common commitment scheme is more effective than an individual commitment scheme the latter depends on altruism while the former involves reciprocity we will if you will The contributors propose that global carbon pricing is the best candidate for a reciprocal common commitment in climate negotiations Each country would commit to placing charges on carbon emissions sufficient to match an agreed global price formula The contributors show that carbon pricing would facilitate negotiations and enforcement improve efficiency and flexibility and make other climate policies more effective Additionally they analyze the failings of the 2015 Paris climate conference Contributors Richard N Cooper Peter Cramton Ottmar Edenhofer Christian Gollier loi Laurent David JC MacKay William Nordhaus Axel Ockenfels Joseph E Stiglitz Steven Stoft Jean Tirole Martin L

Terra Nova Eric W. Sanderson, 2013-06-04 A look at what the American lifestyle has done to the environment and how to move toward a better future In the last century three powerful forces oil cars and suburbs buoyed the American dream Yet now the quality of life in the United States is declining due to these same three forces Our dependence on oil is a root cause of wars recessions and natural disasters Cars consume an outsize share of our incomes and force us to squander time in traffic Meanwhile expensive spread out suburbs devour farmland and in a vicious cycle further entrench our reliance on cars and oil In Terra Nova conservation ecologist Eric W Sanderson the national bestselling author of Mannahatta offers concrete steps toward a solution He delves into natural history architecture chemistry and politics to show how the American relationship to nature has shaped our past and how it can affect our future Illustrated throughout with maps charts and infographics Terra Nova demonstrates that it is indeed possible to achieve a better world Sanderson commendably outlines a new way of life designed to sustain American prosperity health and freedom for generations to come Publishers Weekly

**Infectious Liberty** Robert Mitchell, 2021-04-13 Infectious Liberty traces the origins of our contemporary concerns about public health world population climate change global trade and government regulation to a series of Romantic era debates and their literary consequences Through a series of careful readings Robert Mitchell shows how a range of elements of modern literature from character systems to free indirect discourse are closely intertwined with Romantic era liberalism and biopolitics Eighteenth and early nineteenth century theorists of liberalism such as Adam Smith and Thomas Malthus drew upon the new sciences of population to develop a liberal biopolitics that aimed to coordinate differences among individuals by means of the culling powers of the market Infectious Liberty focuses on such authors as Mary Shelley and William Wordsworth who drew upon the sciences of population to develop a biopolitics beyond liberalism These authors attempted what Roberto Esposito describes as an affirmative biopolitics which rejects the principle of establishing security by distinguishing between valued and unvalued lives seeks to support even the most abject members of a population and

proposes new ways of living in common Infectious Liberty expands our understandings of liberalism and biopolitics and the relationship between them while also helping us to understand better the ways creative literature facilitates the project of reimagining what the politics of life might consist of Infectious Liberty is available from the publisher on an open access basis

**Ripped Apart** Steven Stoft,2020-01-16 We re right to be worried Trump is favored to in in 2020 after four years of struggle But Some Democrats are helping Trump fire up his base Some insinuate that fellow Democrats are corrupt Who s doing this Despite making 117 endorsements in 2018 the three revolutionary PACs flipped zero House seats blue They re dedicated But it was those of us focusing on winning not purity who flipped 43 seats and took back the House The same radicals are galvanizing Trump s base by calling themselves socialists and taking extreme positions This just fuels Trump s war room Why don t we stop them The answer is disturbing yet empowering We ve been deceived by radical mythology By dispelling those myths from crime bill slanders to excessive wokeness this book will leave you saying I knew that sounded wrong Now I know why This will keep you from being deceived and show the way back to a unified Party It s not easy But failing that we will hand Trump the fractured party he can beat in November Investment and Growth in the Time of Climate Change Atanas Kolev (Economist),Atanas Kolev,2012 Cognisant of the many facets of climate change this report looks through the lens of economics that is the social science that measures the economic impact of climate change and the costs and benefits of trying to mitigate it and adapt to it From an investment perspective issues for study include the balance between investment in mitigating greenhouse gas emissions and adaptation to climate change the urgency and timing of investing in both obstacles to investment and policies to remove them and make investment profitable From a growth perspective issues of interest include the link between climate action and economic growth the short term and the long term dimensions of this link and the importance of innovation as an interface between climate action and economic growth One of the key messages from this report is that there is unexploited scope for making Europe s climate action more efficient growth friendly and in tune with fiscal constraints publisher s description Rail and the City Roxanne Warren,2014-09-19 An architect makes the case for rail transit as the critical infrastructure for a fluidly functioning and environmentally sustainable urban society The United States has evolved into a nation of twenty densely populated megaregions Yet despite the environmental advantages of urban density urban sprawl and reliance on the private car still set the pattern for most new development Cars guzzle not only gas but also space as massive acreage is dedicated to roadways and parking Even more pressing the replication of this pattern throughout the fast developing world makes it doubtful that we will achieve the reductions in carbon emissions needed to avoid climate catastrophe In Rail and the City architect Roxanne Warren makes the case for compact urban development that is supported by rail transit Calling the automobile a relic of the twentieth century Warren envisions a release from the tyrannies of traffic congestion petroleum dependence and an oppressively paved environment Technical features of rail are key to its high capacities safety at high speeds and compactness uniquely

qualifying it to serve as ideal infrastructure within and between cities Ultimately mobility could be achieved through extensive networks of public transit particularly rail supplemented by buses cycling walking car sharing and small flexible vehicles High speed rail fed by local transit could eliminate the need for petroleum intensive plane trips of less than 500 miles Warren considers issues of access to transit citing examples from Europe Japan and North America and pedestrian and transit oriented urban design Rail transit she argues is the essential infrastructure for a fluidly functioning urban society

*IOCB 2010 Industrial Organization: a Contract Based approach* , **Et pour quelques degrés de plus...** Christian de Perthuis, 2010-08-27 L incertitude est le maître mot des scientifiques lorsqu'on leur demande d'évaluer l'exposition de nos sociétés au risque climatique Or celle-ci est parfois utilisée dans le débat public pour justifier l'inaction face au changement climatique Voilà pourquoi dans cet ouvrage Christian de Perthuis montre que les risques de l'action face au risque climatique sont sans commune mesure avec ceux dramatiques qui résulteraient de l'inaction Sa démonstration se fonde sur une connaissance exceptionnelle de la négociation climatique internationale et des instruments comme les marchés de permis d'émission dont le fonctionnement est expliqué avec rigueur et illustré par de nombreux exemples Se démarquant des visions catastrophistes Christian de Perthuis aborde sans détour les grandes questions posées aux décideurs comment construire un système énergétique bas carbone Peut-on concilier la lutte contre la déforestation tropicale et la sécurité alimentaire quelles conditions les pays émergents accepteront-ils de prendre leur part de responsabilité La généralisation du prix du carbone peut-elle devenir un vecteur de croissance facilitant la sortie de la crise économique et financière Un livre passionnant et engageant véritable plaidoyer pour l'action Cette deuxième édition entièrement refondue paraîtra également dans une version internationale sous le titre *Our Economic Choices in a Warming World* Cambridge University Press Grand prix du livre des dirigeants 2009

Dépasser Copenhague Steven E. Stoett, 2010-09-01 À quoi attribuer l'échec de Copenhague Pourquoi un cartel des pays consommateurs de pétrole est-il stratégiquement et climatiquement souhaitable Pourquoi la fixation mondiale du prix du carbone est-elle le meilleur type d'engagement climatique Comment mettre en place un Fonds Vert international bien pensés Cet ouvrage soulève aussi la question de la coopération mondiale et propose un schéma d'accord international qui y soit propice

5 Crises Collectif, Philippe Askenazy, Daniel Cohen, 2013-04-03 Dans l'esprit des précédents ouvrages de cette collection les tudes coordonnées par Philippe Askenazy et Daniel Cohen analysent ici d'une façon souvent inattendue les cinq crises majeures auxquelles nous sommes confrontés toutes caractéristiques du désarroi du monde contemporain Crise des limites de la culture de la finance de la société et du climat les chercheurs du Cepremap se livrent à un décryptage approfondi de thèmes dont les causes et les remèdes tissent des liens étroits Du cumul des mandats au prix unique du livre des banques centrales à l'économie politique du néolibéralisme en passant par l'évolution comparative des revenus des patrons et des ménages ce livre passionnant esquisse au-delà de l'approche strictement économique un tableau de la société la fois rude et accessible qui aide mieux à comprendre la crise Et les moyens d'en sortir

Climate Change And The Energy Problem: Physical Science And

Economics Perspective (Second Edition) David L. Goodstein, Michael D. Intriligator, 2017-03-14 This important compendium deals with the primary world problems of global warming and the coming energy crisis. In alternating chapters it lays out the nature of the two interrelated problems and specifies the various economic considerations. Thus it describes the coming shortfall of fossil fuel energy in detail and then presents the economic factors governing possible solutions. Written by two world renowned academics, a physicist who writes about the nature of the problem and an economist who discusses various scenarios and solutions, this unique must-have book highlights the problem from the point of view of a scientist and an economist.
