**Neurocardiology** J. Andrew Armour, Jeffrey L. Ardell, 2004-05-06 The progression of heart disease is associated with changes in the neurohumoral mechanisms that control cardiac function The degree to which this neurohumoral remodeling occurs even before overt signs of cardiac disease become manifest is important for prognosis To determine why some patients experience sudden death while others sustain life in the presence of severely compromised cardiac function the neuronal control of cardiac electrical and mechanical events must be considered Starting at the level of individual neurons and building upwards this book describes the synergistic interactions that occur among intrathoracic and CNS feedback loops to permit precise control of regional cardiac behavior On this basic science foundation subsequent clinical chapters explore the remodeling that occurs in this system with aging with the evolution of specific cardiac pathologies and with the psychological concomitants of heart disease Most importantly these chapters provide unique insights into how specific therapies like beta adrenergic receptor blockade not only affect cardiomyocytes directly but also mitigate the adverse neurohumoral changes that accompany disease processes such as heart failure and essential hypertension The paradigm advanced in this volume is that heart disease is a multifaceted phenomenon involving the interplay of neurohumoral cardiomyocyte and structural elements each of which depends on the other With our cumulative understanding of these interdependent processes new avenues for time appropriate targeted methods of treating heart diseases can be developed     Applications of Biotechnology in Cardiovascular Therapeutics Kewal K. Jain, 2011-07-25 For physicians surgeons and scientists working on cardiovascular disorders Applications of Biotechnology in Cardiovascular Therapeutics serves as an invaluable reference by collecting the essential writings of Dr Kewal K Jain on the topics of biotechnology as they relate to cardiovascular disease This thorough volume includes such subjects as biotechnology and therapeutic delivery to the cardiovascular system cell selective targeted drug delivery cell and gene therapies including antisense and RNA interference cutting edge gene therapy approaches as well as personalized cardiology as a way of integrating new technologies into the selection of the best possible treatment for an individual patient Selected references from recent literature are collected for each chapter and the text is supplemented by a variety of useful tables and figures Comprehensive and up to date Applications of Biotechnology in Cardiovascular Therapeutics will be tremendously useful for those working in life sciences and the pharmaceutical sciences and the inclusion of some basics of cardiovascular diseases will greatly benefit nonmedical readers as well     Fibrosis: Etiology, Pathophysiology, Measurements, and Therapy Yuxia Zhao, Panpan Hao, Peizhe Wang, Fujian Lu, Yanping Liu, 2023-06-01
