Grizzard, Robert Judd, Raymond Kim, 2008-11-03 Cardiovascular MR imaging has become a robust clinically useful modality and the rapid pace of innovation and important information it conveys have attracted many students whose goal is to become adept practitioners In turn many excellent textbooks have been written to aid this process These books are necessary and useful in helping the student learn the underlying pulse sequences used in CMR as well as the imaging findings in a variety of

disorders However one of the difficulties inherent in learning CMR from a book is that the printed format is not the ideal medium to display the dynamic imaging that comprises a typical CMR case For instance it may be difficult to perceive focal areas of wall motion abnormality on serial static pictures but these abnormalities are often easily seen on cine loops One might say that trying to learn CMR solely from a standard textbook with illustrations is like trying to learn to drive by looking at snapshots obtained through the windshield of a moving car The learner needs to see the cardiac motion and decide if it is normal or abnormal he or she needs to be in the driver's seat An additional limitation of the available textbooks on CMR is that while they often have superb illustrations of abnormal findings these images have been preselected
