Suitable Heresies Graham Rabey,2009 The theory suggests that there is a structural similarity between certain basic brain forms and certain basic mind forms and that the former provide a credible explanation for the latter It does not suggest that the causative link has been proved thereby What is claimed is that in the jungle of brain mind research where fundamental physical evidence for speculation is often in short supply the theory provides a scientifically and philosophically arguable clearing and thus a hypothesis worthy of investigation by anyone interested in the mysteries of human thought One implication of the theory amounts to a central heresy namely that on the accumulating evidence our traditional and much cherished one truth thinking conventions will need to be replaced by two truth thinking conventions Another implication of the theory is that it now seems entirely possible that the emergence and nature of philosophy itself have been crucially dependent on our long human struggle to extract single responses from thinking equipment that appears necessarily i e anatomically double and circular the double cycles being mutually inverted

Encyclopedia of Asian Philosophy Oliver Leaman,2006-10-19 Incorporating cultural and religious contexts this unique Encyclopedia provides a vital guide to the main concepts and thinkers in Asian philosophy starting with Abhidharma and ending with Zurvan The main philosophical trends and thinkers in each geographical area are featured with an emphasis on endtemporary developments and movements The A Z structured encyclopedia emphasizes that Asian philosophy is not merely an ancient form of thought but that it is a living philosophy with roots in the past and also a potent and animate presence today This translates into the reciprocal exchange of theories between Eastern and Western thinking for example of new schools of thought such as orientalism Requiring no prior knowledge of philosophy religion or Asian cultures this book is essential reading for students teachers and the interested

How to Think in Medicine Milos

Jenicek, 2018-08-06 Mastery of quality health care and patient safety begins as soon as we open the hospital doors for the first time and start acquiring practical experience. The acquisition of such experience includes much more than the development of sensorimotor skills and basic knowledge of sciences. It relies on effective reason, decision making, and communication shared by all health professionals including physicians, nurses, dentists, pharmacists, and administrators. *How to Think in Medicine: Reasoning, Decision Making, and Communications in Health Sciences* is about these essential skills. It describes how physicians and health professionals reason, make decisions, and practice medicine. Covering the basic considerations related to clinical and caregiver reasoning, it lays out a roadmap to help those new to health care as well as seasoned veterans overcome the complexities of working for the well-being of those who trust us with their physical and mental health. This book provides a step-by-step breakdown of the reasoning process for clinical work and clinical care. It examines both the general and medical ways of thinking, reasoning, argumentation, fact-finding, and using evidence. It explores the principles of formal logic as applied to clinical problems and the use of evidence in logical reasoning. In addition to outlining the fundamentals of decision making, it integrates coverage of clinical reasoning, risk assessment, diagnosis, treatment, and prognosis in evidence-based medicine. Presented in four sections, this book discusses the history and position of the problem and the challenge of medical thinking, provides the philosophy, interfacing topics of interest for health sciences professionals including the probabilities, uncertainties, risks, and other quantifications in health, by steps of clinical work, decision making in clinical and community health care, research and practice, communication in clinical and community care including how to write medical articles, clinical case studies, and case reporting, and oral and written communication in clinical and community practice and care.
