Chen, Arthur Eisenkraft, David Fortus, Joseph Krajcik, Knut Neumann, Jeffrey Nordine, Allison Scheff, 2014-04-09 This volume presents current thoughts research and findings that were presented at a summit focusing on energy as a cross cutting concept in education involving scientists science education researchers and science educators from across the world The chapters cover four key questions what should students know about energy what can we learn from research on teaching and learning about energy what are the challenges we are currently facing in teaching students this knowledge and what needs be done to meet these challenges in the future Energy is one of the most important ideas in all of science and it is useful for predicting and explaining phenomena within every scientific discipline The challenge for teachers is to respond to recent policies requiring them to teach not only about energy as a disciplinary idea but also about energy as an analytical framework that cuts across disciplines Teaching energy as a crosscutting concept can equip a new generation of scientists and engineers to think about the latest cross disciplinary problems and it requires a new approach to the idea of energy This book examines the latest challenges of K 12 teaching about energy including how a comprehensive understanding of energy can be developed The authors present innovative strategies for learning and teaching about energy revealing overlapping and diverging views from scientists and science educators The reader will discover investigations into the learning progression of energy how understanding of energy can be examined and proposals for future directions for work in this arena Science teachers and educators science education researchers and scientists themselves will all find the discussions and research presented in this book engaging and informative *André Bazin's Film Theory* Angela Dalle Vacche, 2020 Through metaphors and allusions to art science and religion Andr Bazin s writings on the cinema explore a simple yet profound question what is a human For the famous French film critic a human is simultaneously a rational animal and an irrational being Bazin s idea of the cinema is a mind machine where the ethical implications have priority over aesthetic issues And in its ability to function as an art form for the masses cinema is the only medium that can address an audience at the individual and community levels simultaneously the audience sees the same film but each individual relates to the narrative in a different way In principle cinema can unsettle our routines in productive ways and expand our sense of belonging to a much larger picture By arguing

that this dissident Catholic's worldview is anti anthropocentric Angela Dalle Vacche concludes that André Bazin's idea of the cinema recapitulates the histories of biological evolution and modern technology inside our consciousness Through the projection of recorded traces of the world onto a brain like screen the cinema can open viewers up to self interrogation and empathy towards Otherness Bazin was neither a spiritualist nor an animist or a pantheist yet his film theory leads also to ideas of a more cosmological persuasion through editing and camera movement cinema explores our belonging to a vast universe that extends from the microbes of the microscope to the stars of the telescope Such ideas of connectedness coupled with Bazin's well known emphasis of realism form the foundation for his film theory's embrace of Italian neorealism Choosing to avoid a quantitative naturalism based on accumulation of details Bazin's theory instead promotes the kind of cinema that celebrates perceptual displacement the objectification of human behavior and one's own critical self awareness

Ways of Nature Pany Decossard, 2023-12-13 In *Ways of Nature* Dr D cossard articulates the first theory of evolution since Darwin By his own account he stumbled upon his proposed mechanism of eukaryogenesis using a process worthy of the three princes of Serendip From there he succeeded in establishing a comprehensive theory of life and the universe For instance we learn that a new paradigm called the seeds first theory explains biodiversity among eukaryotic species such as those of plants and animals It is interesting to discover what contributions if any the theory of natural selection provided to the new model Nevertheless the modern version of Darwinism or neo Darwinism has long been engaged in a major antagonism with the theory of Intelligent Design ID which holds that the living world emanated from the conscious choice of a designer rather than chance events In any case the author will be the first one to admit that the new model of evolution delineated in this opus is not born out of the crisis that is currently rocking neo Darwinism a crisis sparked by the assaults of many thinkers and scientists including those of the ID movement He is also quick to reveal how little he knew about the standoff between the two main protagonists in the crisis of the theory of natural selection before he began work on this book cloistered as he was both literally and figuratively within the confines of emergency rooms caring for the sick and injured In *Ways of Nature* Dr D cossard explores the paths taken by life since its apparition and shines a bright spotlight on its destiny and the fate of the universe In so doing he also identifies the connections between the living and the nonliving and opens our eyes to novel ideas about physical phenomena whose conventional descriptions we thought were settled *Ways of Nature* is undoubtedly a landmark publication It is indeed a paradigm shift la Kuhn in our understanding of life and its evolution

The Antisocial Mind Ghahreman Khodadad, 2024-10-16 In this book Professor Ghahreman Khodadad illuminates the basis of human behavior by examining the structures that underline antisociality The book s central thesis is that antisocial people are so thanks to biological and neurological structures The

principle of structure to function is used to argue that the brain without us being conscious of it produces our behaviors. If this claim is correct then antisocial individuals are not accountable for their antisocial behavior and they should be treated respectfully instead of being punished. Furthermore, prisons should accordingly be converted into rehabilitation treatment and behavioral research centers. This is a book for the general reader who is interested in the basis of human behavior. It should also be of interest to psychologists, psychiatrists, neuroscientists, geneticists, neurobiologists, and philosophers.

Radiology, Lasers, Nanoparticles and Prosthetics Hartmut Zabel, 2017-06-26. Order the Set Medical Physics and save almost 25%. Medical Physics covers the applied branch of physics concerned with the application of concepts and methods of physics to diagnostics and therapeutics of human diseases. This second volume in a series of two complements the imaging modalities presented in the first volume by those methods which use ionizing radiation. The first chapters in part A on Radiography provide a solid background on radiation sources, interaction of radiation with matter, and dosimetry for the safe handling of radiation before introducing x-ray radiography, scintigraphy, SPECT, and PET. The second part B on Radiotherapy starts from basic information on the life cycle of cells, radiation response of healthy and tumorous cells. In subsequent chapters, the main methods of radiation treatment are presented in particular x-ray radiotherapy, proton and neutron radiation therapy, and brachytherapy. The last part C, Diagnostics and Therapeutics beyond Radiology, covers laser applications, multifunctional nanoparticles, and prosthetics. The present volume introduces the physical background on ionizing radiation, the biological effectiveness of radiation, as well as radiation-based methods for diagnostics and therapeutics. This covers the second part of the entire field of medical physics, including imaging methods with the use of ionizing radiation, radiation therapy with photons, protons, and neutrons, laser methods, nanomedicine, and prosthetics. Provides an introduction for Bachelor students to the main concepts of Medical Physics during their first semesters, guiding them to further specialized and advanced literature. Contains many questions; answers related to the content of each chapter are also available as a set together with Volume 1. Contents: Part A: Radiography: X-ray generation, Nuclei and isotopes, Interaction of radiation with matter, Radiation detection and protection, X-ray radiography, Scintigraphy, Positron emission tomography. Part B: Radiotherapy: Cell cycle and cancer, X-ray radiotherapy, Charged particle radiotherapy, Neutron radiotherapy, Brachytherapy. Part C: Diagnostics and therapeutics beyond radiology: Laser applications in medicine, Nanoparticles for nanomedical applications, Prosthetics.
