Can Theories be Refuted? Sandra Harding, 2012-12-06 According to a view assumed by many scientists and philosophers of science and standardly found in science textbooks it is controlled experience which provides the basis for distinguishing between acceptable and unacceptable theories in science acceptable theories are those which can pass empirical tests It has often been thought that a certain sort of test is particularly significant crucial experiments provide supporting empirical evidence for one theory while providing conclusive evidence against another However in 1906 Pierre Duhem argued that the falsification of a theory is necessarily ambiguous and therefore that there are no crucial experiments one can never be sure that it is a given theory rather than auxiliary or background hypotheses which experiment has falsified w V Quine has concurred in this judgment arguing that our statements about the external world face the tribunal of sense experience not individually but only as a corporate body Some philosophers have thought that the Duhem Quine thesis gratuitously raises perplexities Others see it as doubly significant these philosophers think that it provides a base for criticism of the foundational view of knowledge which has dominated much of western thought since Descartes and they think that it opens the door to a new and fruitful way to conceive of scientific progress in particular and of the nature and growth of knowledge in general

Quine Peter Hylton, 2007-08-07 Quine was one of the foremost philosophers of the Twentieth century In this outstanding overview of Quine's philosophy Peter Hylton shows why Quine is so important and how his philosophical naturalism has been so influential within analytic philosophy Beginning with an overview of Quine's philosophical background in logic and mathematics and the role of Rudolf Carnap's influence on Quine's thought he goes on to discuss Quine's famous analytic synthetic distinction and his arguments concerning the nature of the a priori He also

discusses Quine's philosophy of language and epistemology his celebrated theory of the indeterminacy of translation and his broader views of ontology and modality This book is essential reading for anyone interested in Quine twentieth century philosophy and the philosophy of language *The Philosophy of Karl Popper* Herbert Keuth, 2005 This is a systematic exposition of Popper's philosophy covering in part 1 the philosophy of science in part 2 the social philosophy and in part 3 the later metaphysics in particular the theses to solve indeterminism determinism and mind body problems and the famous idea of a third world of objective thought This book is more comprehensive than any current introduction to Popper Its perspicuous structure and lucid exposition should ensure that it could be used in courses in both the philosophy of science and the philosophy of social science **Real Numbers, Generalizations of the Reals, and Theories of Continua** P. Ehrlich, 2013-06-29 Since their appearance in the late 19th century the Cantor Dedekind theory of real numbers and philosophy of the continuum have emerged as pillars of standard mathematical philosophy On the other hand this period also witnessed the emergence of a variety of alternative theories of real numbers and corresponding theories of continua as well as non Archimedean geometry non standard analysis and a number of important generalizations of the system of real numbers some of which have been described as arithmetic continua of one type or another With the exception of E W Hobson's essay which is concerned with the ideas of Cantor and Dedekind and their reception at the turn of the century the papers in the present collection are either concerned with or are contributions to the latter groups of studies All the contributors are outstanding authorities in their respective fields and the essays which are directed to historians and philosophers of mathematics as well as to mathematicians who are concerned with the foundations of their subject are preceded by a lengthy historical introduction *In Search of a New Humanism* M.R. Egidio, 2013-04-17 This collection of essays presents a systematic and up to date survey of the main aspects of Georg Henrik von Wright's philosophy tracing the general humanistic leitmotiv to be found in his vast varied output The analysis covers the developments in Von Wright's thought up to the end of the 1990s The essays are arranged thematically to focus on the chief areas of Von Wright's interests practical rationality human action and determinism philosophical logic and theories of norms research in the analytical tradition and Wittgenstein studies Readership Scholars and students of moral philosophy logic psychology sociology cognitive science and the history of contemporary philosophy History and Philosophy of Constructive Type Theory Giovanni Sommaruga, 2013-03-09 A comprehensive survey of Martin L f's constructive type theory considerable parts of which have only been presented by Martin L f in lecture form or as part of conference talks Sommaruga surveys the prehistory of type theory and its highly complex development through eight different stages from 1970 to 1995 He also provides a systematic presentation of the latest version of the theory as offered by Martin L f at Leiden University in Fall 1993 This presentation gives a fuller and updated account of the system Earlier brief presentations took no account of the issues related to the type theoretical approach to logic and the foundations of mathematics while here they are accorded an entire part of the book Readership

Comprehensive accounts of the history and philosophy of constructive type theory and a considerable amount of related material Readers need a solid background in standard logic and a first basic acquaintance with type theory

New Perspectives on Cybernetics G. Vijver, 2013-06-29 Gertrudis Van de Vijver Seminar of Logic and Epistemology University of Ghent Before being classified under the fashionable denominators of complexity and chaos self organization and autonomy were intensely inquired into in the cybernetic tradition Despite all rejections that cybernetics has gone through in the second half of this century today its importance is more and more recognized Its decisive influence for connectionist theories autopoietic and constructivist theories for different forms of applied or experimental epistemology is being more and more understood and generally accepted It is mainly due to the success of connectionist models that we observe today a revival of interest for cybernetics The 1943 article by McCulloch and Pitts is evidently a founding article Cybernetics has however a much broader interest than the one linked to technical mathematical details relevant to the construction of networks For instance the evolution from first to second order cybernetics the ways of approaching biological and cognitive phenomena in the latter and the limits that were formulated there are particularly meaningful to understand current developments and divergences in connectionism A nuanced picture of cybernetic s history and its present state is therefore clearly epistemologically essential

The Growth of Mathematical Knowledge Emily Grosholz, Herbert Breger, 2013-04-17 Mathematics has stood as a bridge between the Humanities and the Sciences since the days of classical antiquity For Plato mathematics was evidence of Being in the midst of Becoming garden variety evidence apparent even to small children and the unphilosophical and therefore of the highest educational significance In the great central similes of The Republic it is the touchstone of intelligibility for discourse and in the Timaeus it provides in an oddly literal sense the framework of nature insuring the intelligibility of the material world For Descartes mathematical ideas had a clarity and distinctness akin to the idea of God as the fifth of the Meditations makes especially clear Cartesian mathematical constructions as well as objects envisioned by the soul in the Principles the work of the physicist who provides a quantified account of the machines of nature hovers between description and constitution For Kant mathematics reveals the possibility of universal and necessary knowledge that is neither the logical unpacking of concepts nor the record of perceptual experience In the Critique of Pure Reason mathematics is one of the transcendental instruments the human mind uses to apprehend nature and by apprehending to construct it under the universal and necessary laws of Newtonian mechanics

Other Minds Alec Hyslop, 2013-03-09 This book has been a long time in the making Other issues have taken me away from it from time to extended time But I kept coming back to the problem of other minds It has remained a great issue it is much contested still and it is after all close to us all I like believing that the time taken has deepened my understanding of the problem and how it is to be handled Other people some by disagreeing vehemently have helped greatly I mention in particular Brian Ellis Robert Fox Graeme Marshali Tim Oakley Ray Pinkerton and Robert Young Robert Pargetter argued with me and kept insisting that I

write this book John Bigelow Michael Bradley Keith Campbell Frank Jackson and William Lycan assisted by reading an earlier version and providing valued comments Frank Jackson has been specially helpful not just on this topic He can be blamed for initially causing me to take the analogical inference seriously The La Trobe Philosophy Department has been a good place to do philosophy I am grateful to Suzanne Hayster Sandra Paul and Betty Pritchard for struggling at various times with various recalcitrant manuscripts Most particularly I thank Gai Larkin She has seen the project through with considerably more than efficiency

A. Watson,2012-12-06 In Representational Ideas From Plato to Patricia Churchland Watson argues that all intelligible theories of representation by ideas are based on likeness between representations and objects He concludes that 17th century materialist criticisms of having mental representations in the mind apply to contemporary material representations in the brain as proposed by neurophilosophers The argument begins with Plato with particular stress on Descartes Malebranche and Arnauld He then proceeds with an examination of the picture theory developed by Wittgenstein Carnap and Goodman and concludes with an examination of Patricia Churchland Ruth Millikan Robert Cummins and Mark Rollins The use of the historical development of representationalism to pose a central problem in contemporary cognitive science is unique For students scholars and researchers in neuroscience cognitive science philosophy of mind and modern philosophy **National Union Catalog** ,1973 Includes entries for maps and atlases
