elles sont de tailles plus importantes mais aussi plus rigides que les cellules sanguines saines Cette technologie a fait l'objet d'un transfert industriel partir duquel est née la start up SmartCatch en 2016 Le cœur d'activité de l'entreprise est le développement de ces micro dispositifs de capture les S MDCs afin de les rendre accessibles au sein des unités de recherches et du milieu hospitalier C'est dans le contexte du développement des S MDCs que s'inscrivent les travaux de cette thèse CIFRE en collaboration entre SmartCatch et le LAAS CNRS Le fil conducteur de cette thèse repose sur une évolution vers des dispositifs capables de fournir des informations sur le processus de capture en temps réel à l'utilisateur Les informations ciblées sont la détection des événements de capture cellulaire in situ ainsi qu'un suivi de la vitesse de l'écoulement sanguin au voisinage des S MDCs L'accès à ces informations permettrait d'établir une calibration et un protocole d'utilisation précis nécessaires à l'introduction de ces dispositifs en routine clinique Dans cette perspective deux pistes principales ont été explorées au cours de la thèse afin de répondre ces deux problématiques La première repose sur l'intégration de micro électrodes pour permettre la détection électrique des cellules capturées La seconde repose sur un système de velocimétrie Doppler pour le suivi en temps réel de l'évolution de la vitesse d'écoulement au voisinage des S MDCs Le document de thèse détaille les procédés de fabrication de ces micro dispositifs des études préliminaires faisant objet de preuve de concept ainsi que les perspectives de développement pour leur introduction en routine clinique
