Regulation of Membrane Na⁺-K⁺ ATPase Sajal Chakraborti, Naranjan S Dhalla, 2015-12-16 Na K ATPase or Na pump ATPase a member of P type ATPase superfamily is characterized by association of multiple isoforms mainly of α and β subunits At present four different α 1 2 3 and 4 and three β 1 2 and 3 isoforms have been identified in mammalian cells and their differential expressions are tissue specific Regulation of Na K ATPase activity is an important but a complex process which involves short term and long term mechanisms Short term regulation of Na K ATPase is either mediated by changes in intracellular Na concentrations that directly affect the Na pump activity or by phosphorylation dephosphorylation mediated by some stimulants leading to changes in its expression and transport properties On the other hand long term regulation of Na K ATPase is mediated by hormones such as mineralocorticoids and thyroid hormones which cause changes in the transcription of genes of α and β subunits leading to an increased expression in the level of Na pump Several studies have revealed a relatively new type of regulation that involves the association of small single span membrane proteins with this enzyme These proteins belong to the FXYD family the members of which share a common signature sequence encompassing the transmembrane domain adjacent to the α isoforms of subunits of Na K ATPase Considering the extraordinary importance of Na K ATPase in cellular function several internationally established investigators have contributed their articles in the monograph entitled Regulation of Membrane Na K ATPase for inspiring young scientists and graduate students to enrich their knowledge on the enzyme and we are sure that this book will soon be considered as a comprehensive scientific literature in the area of Na K ATPase regulation in health and disease *SPEC - Colorectal Cancer: Disease and Advanced Drug Delivery Strategies, 12-Month Access, eBook* Bhupendra G. Membrane Transport in Biology Hans H. Ussing, James A. Schafer, Poul Kristensen, 1992-06-25

Biochemistry of Cell Membranes S. Papa, Sergio Papa, J.M. Tager, 1995-05 This book consists of a series of reviews on selected topics within the rapidly and vastly expanding field of membrane biology. Its aim is to highlight the most significant and important advances that have been made in recent years in understanding the structure, dynamics and functions of cell membranes. The progress that is being made in research in this field is due to the application of integrated experimental approaches utilizing sophisticated and novel techniques in molecular biology, cell biology, biophysics and biochemistry. Due to the advances made, many problems have been or are being solved at the molecular level. With the help of an Editorial Advisory Board consisting of Jean Pierre Changeux (Paris), Paolo Comoglio (Torino), Rainer Jaenicke (Regensburg), Sten Orrenius (Stockholm), Lorenzo Pinna (Padova), Konrad Sandhoff (Bonn) and Gottfried Schatz (Basel), we have selected a number of topics in areas in which progress has been particularly rapid and have invited internationally acknowledged experts in the field to review these topics. The areas covered in this monograph are: 1. Signal transduction, 2. Membrane traffic, Proteins and lipids, 3. Bioenergetics, Energy transfer and membrane transport, 4. Cellular ion homeostasis, 5. Growth factors and adhesion molecules, 6. Structural analysis of membrane proteins and 7. Membranes and
