

EC6503 - TRANSMISSION LINES AND WAVEGUIDES
TRANSMISSION LINES AND WAVEGUIDES
UNIT I - TRANSMISSION LINE THEORY

1. Define – Characteristic Impedance

[M/J–2006, N/D–2006]

Characteristic impedance is defined as the impedance of a transmission line measured at the sending end. It is given by

$$Z_0 = \sqrt{Z/Y}$$

where $Z = R + j\omega L$ is the series impedance

$Y = G + j\omega C$ is the shunt admittance

2. State the line parameters of a transmission line.

The line parameters of a transmission line are resistance, inductance, capacitance and conductance.

Resistance (R) is defined as the loop resistance per unit length of the transmission line. Its unit is ohms/km.

Inductance (L) is defined as the loop inductance per unit length of the transmission line. Its unit is Henries/km.

Capacitance (C) is defined as the shunt capacitance per unit length between the two transmission lines. Its unit is Farad/km.

Conductance (G) is defined as the shunt conductance per unit length between the two transmission lines. Its unit is mhos/km.

3. What are the secondary constants of a line?

The secondary constants of a line are

i. Characteristic impedance, $Z_0 = \sqrt{Z/Y}$

ii. Propagation constant, $\gamma = \alpha + j\beta$

4. Why the line parameters are called distributed elements?

The line parameters R , L , C and G are distributed over the entire length of the transmission line. Hence they are called distributed parameters. They are also called primary constants.

The infinite line, wavelength, velocity, propagation & Distortion line, the telephone cable

5. What is an infinite line?

[M/J–2012, A/M–2004]

An infinite line is a line where length is infinite. For an infinite line, the input impedance is equal to its characteristic impedance. A finite line, which is terminated by characteristic impedance is also called infinite line.

6. Define – Propagation Constant

[N/D–2007, M/J–2009]

Propagation constant is defined as the natural logarithm of the ratio of the sending end current or voltage to the receiving end current or voltage of a line. It gives the manner in which the wave is propagated along the line. It specifies the variation of voltage and current in the line as a function of its length.

7. How does frequency distortion occur in a line?

[M/J–2007]

When signals having many frequency components are transmitted along a line, different frequency components have different attenuations. Hence the receiving end waveform will not be identical with the input waveform at the sending end. This type of distortion is called frequency distortion.

8. What is an equalizer in transmission line?

[A/M–2005]

An equalizer is a network whose frequency and phase characteristics are adjusted to the inverse the line. This results in a uniform frequency response over the desired frequency band. Hence the attenuation is equal for all the frequencies.

William Sinnema,1979 *The Design of Transmission Lines and Waveguide Structures Using the Maximum Principle* Jerry Don Burchfiel,MASSACHUSETTS INST OF TECH LEXINGTON LINCOLN LAB.,1968 A distributed parameter maximum principle provides the basis for design of optimal lossless impedance matching structures Given an arbitrary wide band source at $z = 1$ and an arbitrary load at $z = 0$ the optimization procedure synthesizes a uniform cross section dielectric loaded

waveguide or transmission line of length l which maximizes the real power delivered to the load This optimization is performed subject to constraints on the filler material $\mu_z \mu_{z0}$ and ϵ_z in $\epsilon_1 \epsilon_2 \epsilon_n$ The solution is easily implemented as the filler consists of successive intervals of readily available dielectric materials An iterative numerical procedure for solving the split boundary function necessary conditions is given and a number of typical solutions for transmission line and waveguide couplers are presented In the examples studied the performance obtained using only ϵ_{MIN} and ϵ_{MAX} was within 0.2 percent of that obtained using a continuum of dielectric constants $\epsilon_{\text{MIN}} \epsilon_{\text{MAX}}$ Author Transmission Lines, Antennas and Wave Guides.
