Geophysical Monitoring for Geologic Carbon Storage Lianjie Huang, 2022-03-09 Methods and techniques for monitoring subsurface carbon dioxide storage Storing carbon dioxide in underground geological formations is emerging as a promising technology to reduce carbon dioxide emissions in the atmosphere A range of geophysical techniques can be deployed to remotely track carbon dioxide plumes and monitor changes in the subsurface which is critical for ensuring for safe long term storage Geophysical Monitoring for Geologic Carbon Storage provides a comprehensive review of different geophysical techniques currently in use and being developed assessing their advantages and limitations Volume highlights include Geodetic and surface monitoring techniques Subsurface monitoring using seismic techniques Subsurface monitoring using non seismic techniques Case studies of geophysical monitoring at different geologic carbon storage sites The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

Fractals in Reservoir Engineering H. H. Hardy, Richard A. Beier, 1994 Many natural objects have been found to be fractal and fractal mathematics has been used to generate many beautiful nature scenes Fractal mathematics is used in image compression and for movies and is now becoming an engineering tool as well This book describes the application of fractal mathematics to one engineering specialty reservoir engineering This is the process of engineering the production of oil and gas The reservoir engineer's job is to design and predict production from underground oil and gas reservoirs The successful application of fractal mathematics to this engineering discipline should be of interest not only to reservoir engineers but to other engineers with their own potential applications as well Geologists will find surprisingly good numerical descriptions of subsurface rock distributions Physicists will be interested in the application of renormalization and percolation theory described in the book Geophysicists will find the description of fluid flow scaling problems faced by the reservoir engineer similar to their problems of scaling the transport of acoustic signals

Geologic Carbon Sequestration V. Vishal, T.N. Singh, 2016-05-11 This exclusive compilation written by eminent experts from more than ten countries outlines the processes and methods for geologic sequestration in different sinks It discusses and highlights the details of individual storage types including recent advances in the science and technology of carbon storage The topic is of immense interest to geoscientists reservoir engineers environmentalists and researchers from the scientific and industrial communities working on the methodologies for carbon dioxide storage Increasing concentrations of anthropogenic carbon dioxide in the atmosphere are often held responsible for the rising temperature of the globe Geologic sequestration prevents atmospheric release of the waste

greenhouse gases by storing them underground for geologically significant periods of time The book addresses the need for an understanding of carbon reservoir characteristics and behavior Other book volumes on carbon capture utilization and storage CCUS attempt to cover the entire process of CCUS but the topic of geologic sequestration is not discussed in detail This book focuses on the recent trends and up to date information on different storage rock types ranging from deep saline aquifers to coal to basaltic formations

G. Ayala,1993 Geostatistics Banff 2004 Oy Leuangthong,Clayton V. Deutsch,2008-01-24 The return of the congress to North America after 20 years of absence could not have been in a more ideal location The beauty of Banff and the many offerings of the Rocky Mountains was the perfect background for a week of interesting and innovative discussions on the past present and future of geostatistics The congress was well attended with approximately 200 delegates from 19 countries across six continents There was a broad spectrum of students and seasoned geostatisticians who shared their knowledge in many areas of study including mining petroleum and

environmental applications You will find 119 papers in this two volume set All papers were presented at the congress and have been peer reviewed They are grouped by the different sessions that were held in Banff and are in the order of presentation These papers provide a permanent record of different theoretical perspectives from the last four years Not all of these ideas will stand the test of time and practice however their originality will endure The practical applications in these proceedings provide nuggets of wisdom to those struggling to apply geostatistics in the best possible way Students and practitioners will be digging through these papers for many years to come Oy Leuangthong Clayton V Deutsch

Energy Geotechnics includes 97 technical papers presented at the 1st International Conference on Energy Geotechnics ICEGT 2016 Kiel Germany 29-31 August 2016. The contributions provide significant advances and critical challenges facing the areas of fundamentals, constitutive and numerical modelling, testing techniques and energy geotechnics applications. Energy Geotechnics contains seven regular sessions and six minisymposia with contributions on discrete and continuum based modelling as well as investigations based on experimental studies at various scales. The papers on discrete and continuum based modelling examine the behaviour of gas hydrate sediments, cyclic and Thermo-Hydro-Mechanical (T-H-M) modelling of energy piles, non-linear behaviour of energy geo-storage and geo-structures, deformation of geomaterials, modelling of borehole heat exchangers and energy walls, analysis of hydraulic fracturing and discontinuities in reservoirs, engineering problems involving gas hydrates, sediments and modelling of environmental impact of energy geotechnical processes.

geoENV I – Geostatistics for Environmental Applications A.O. Soares, Jaime Gómez-Hernández, Roland Froidevaux, 2013-06-29. GeoENV96, the First European Conference on Geostatistics for Environmental Applications held in Lisbon, was conceived to bring together researchers mostly from but not limited to Europe working on environmental issues approached by geostatistical methods. Papers were attracted from fields as diverse as hydrogeology, biology, soil sciences, air pollution or ecology. It is clear that there is a lot of activity on geostatistics for environmental applications as the collection of papers in this book reveals. GeoENV96 was successful in the number and quality of the papers presented which surpassed the initial expectations. There is still a large dispersion on the level of application of geostatistics in the different areas. To help in spreading the most novel applications of geostatistics across disciplines and to discuss the specific problems related to the application of geostatistics to environmental applications, GeoENV96 is intended to set the pace and to be the first of a series of biennial meetings. The pace is set now; let us wait for GeoENV98, Lisbon, November 1996. The Executive Committee: Jaime Gomez Hernandez, Roland Froidevaux, Amílcar Soares.
