Metadata-driven Software Systems in Biomedicine Prakash M. Nadkarni, 2011-05-27 While the use of database technology is ubiquitous throughout IT and health IT in particular it is not generally appreciated that as a database increases in scope certain designs are far superior to others In biomedical domains new knowledge is being generated continually and the databases that must support areas such as clinical care and research must also be able to evolve while requiring minimal or no logical physical redesign Appropriately designed metadata and software designed to utilize it effectively can provide significant insulation against change Many of the larger EMR or clinical research database vendors have realized this but their designs are proprietary and not described in the literature Consequently numerous misconceptions abound among individuals who have not had to work with large scale biomedical systems and graduates of a health or bioinformatics program may find that they need to unlearn what they were taught in database and software design classes in order to work productively with such systems A working knowledge of such systems is also important for individuals who are not primarily software developers such as health informaticians medical information officers and data analysts This book is in a sense intended to prepare all of the above individuals for the real world **The Emergency Medical Responder** Christian

Ventura, Edward Denton, Emily Van Court, 2021-01-19 Emergency medical service providers serve as the primary immediate response to emergencies of all kinds including natural disasters and acts of terrorism in the United States with states serving as the regulatory agencies responsible for training scope of practice and continuing education for potential and working EMS providers This text serves as a comprehensive guide to individuals in training to become emergency medical service providers and complements Emergency Medical Technician EMT and Emergency Medical Responder EMR courses as the

primary classroom text consistent with National EMS Curriculum Standards and other industry guidelines Each chapter addresses a relevant organ system and its physiology methods of assessment treatment recommendations along with a case study to illustrate the topics at hand So much of what is involved in emergency medical services is based on practical and applicable knowledge of situations and these case studies will provide students with exposure to the field work they will be responding to Written with the context of COVID 19 implications in mind this is first EMT text of its kind produced after the onset of the pandemic with considerations and citations from national and international emergency medicine journals to incorporate guidelines and best practices in light of shifting conditions and expectations **AED/CPR/First Aid Training**
