Ecological Niches Linking Classical And Contemporary Approaches Interspecific Interactions:

Ecological Niches Jonathan M. Chase, Mathew A. Leibold, 2003-07 Why do species live where they live What determines the abundance and diversity of species in a given area What role do species play in the functioning of entire ecosystems All of these questions share a single core concept the ecological niche Although the niche concept has fallen into disfavor among ecologists in recent years Jonathan M Chase and Mathew A Leibold argue that the niche is an ideal tool with which to unify disparate research and theoretical approaches in contemporary ecology Chase and Leibold define the niche as including both what an organism needs from its environment and how that organism's activities shape its environment Drawing on the theory of consumer resource interactions as well as its graphical analysis they develop a framework for understanding niches that is flexible enough to include a variety of small and large scale processes from resource competition predation and stress to community structure biodiversity and ecosystem function Chase and Leibold's synthetic approach will interest ecologists from a wide range of subdisciplines

Small Carnivores Emmanuel Do Linh San, Jun J. Sato, Jerrold L. Belant, Michael J. Somers, 2022-07-13 Small Carnivores Evolution Ecology Behaviour and Conservation This book focuses on the 232 species of the mammalian Order Carnivora with an average body mass 21.5 kg Small carnivores inhabit virtually all of the Earth's ecosystems adopting terrestrial semi fossorial semi arboreal or semi aquatic lifestyles They occupy multiple trophic levels and therefore play important roles in the regulation of ecosystems such as natural pest control seed dispersal and nutrient cycling In areas where humans have extirpated large carnivores small carnivores may become the dominant predators which may increase their abundance mesopredator release to the point that they can sometimes destabilize communities drive local extirpations and reduce overall biodiversity On the other hand one third of the world's small carnivores are threatened or near threatened with extinction This results from regionally burgeoning human populations industrial and agricultural activities causing habitat reduction destruction fragmentation and pollution Overexploitation persecution and the impacts of introduced predators competitors and pathogens have also

negatively affected many small carnivore species Although small carnivores have been intensively studied over the past decades bibliometric studies showed that they have not received the same attention given to large carnivores Furthermore there is huge disparity in how research efforts on small carnivores have been distributed with some species intensively studied and others superficially or not at all This book aims at filling a gap in the scientific literature by elucidating the important roles of and documenting the latest knowledge on the world s small carnivores pThis is a book that has been needed for decades It is the first compendium of recent research on a group of mammals which has received almost no attention before the early 1970s This book covers a wide range of subdisciplines and techniques and should be considered a solid baseline for further research on this little known group of highly interesting mammals As our knowledge regarding how ecosystems function increases then the valuable role of small carnivores and the necessity for their conservation should be regarded as of paramount importance The topics covered in this book should therefore be of great interest not only to academics and wildlife researchers but also to the interested layman

Plant Ecology of Indian Himalaya Rajendra Mohan Panda,2022-09-28

This book discusses plant invasions and environmental impacts on the Himalayas through a novel procedure and helps to understand the influences of climate physiography soil and disturbance on plant richness in mountain systems Assessing invasion risks to mountain space under future climate change scenarios is highly significant for appropriate preparedness and this book details analytical and modeling techniques to assess the conditions of mountain ecosystem and ecology to better inform our preparation for future environmental challenges The book presents the state of the art understanding of the species environment relationships in a global biodiversity hotspot relatively unexplored areas for the Himalayan life form richness The book provides not only the academic but also the professional community and policymakers a review and update on modeling applications for determining interactions of the plant species with the environment of a subtropical mountain

ecosystem across a climatic gradient Currently there is no book in the market addressing the implementation and applications of modeling in the Himalayan plant and environment continuum and most of the existing books cover the species richness pattern along the elevation gradient and basic ethnobotanical features of a mountain system Since the book covers the applications of novel methods and modeling for ecological analysis of mountain ecosystems it will also be significant for the professional market Therefore the book aims to fill the gap between scientists and professionals in the use of modeling strategies to monitor biodiversity in mountain systems for the formulation of conservation adaptation and mitigation principles

The Macroecological Perspective José Alexandre Felizola Diniz-Filho,2023-11-27 This comprehensive volume discusses the patterns and processes analyzed in macroecology with a distinct look at the theoretical and methodological issues underlying the discipline as well as deeper epistemological matters The book serves as a synthesis of macroecological literature that has been published since Brown and Maurer proposed and defined the term macroecology in 1989 Author Jos Alexandre Felizola Diniz Filho draws from the different disciplines and branches ecology evolutionary biology physiology behavioral sciences climatology and paleontology that make up macroecology to present a full holistic picture of where the discipline stands Through ten chapters Diniz Filho moves from a discussion of what macroecology actually is to macroecological modeling to the more applied side of the discipline covering topics such as richness and diversity patterns and patterns in body size The book concludes with a synthesis of how macroecological research is done in a theoretical and operational sense as well as unifying explanations for each of the macroecological patterns discussed moving on to evaluate which theories and models are still useful and which ones can be abandoned The book is intended for academics young researchers and students interested in macroecology and conservation biogeography In addition because of the integrative nature of macroecology and the theoretical and methodological background in the book it can be of interest to researchers working in related fields including but not limited to ecology and evolutionary biology

Biotic Interactions in the Tropics David Burslem,Michelle Pinard,Sue Hartley,2005-09-08 Tropical ecosystems house a significant proportion of global biodiversity To understand how these ecosystems function we need to appreciate not only what plants animals and microbes they contain but also how they interact with each other This volume first published in 2005 synthesises the state of knowledge in this area with chapters providing reviews or case studies drawn from research conducted in both Old and New World tropics and including biotic interactions among taxa at all trophic levels In most chapters plants typically trees are the starting point but taken together the chapters consider interactions of plants with other plants with micro organisms and with animals and the inter relationships of human induced disturbance with interactions among species An underlying theme of the volume is the attempt to understand the maintenance of high diversity in tropical regions which remains one of the most significant unexplained observations in ecological studies

General Technical Report RMRS, 1998 [Strategies for Conserving Native Salmonid Populations at Risk from Nonnative Fish Invasions](#) Kurt D. Fausch, 2006 Native salmonid populations in the inland West are often restricted to small isolated habitats at risk from invasion by nonnative salmonids However further isolating these populations using barriers to prevent invasions can increase their extinction risk This monograph reviews the state of knowledge about this tradeoff between invasion and isolation We present a conceptual framework to guide analysis focusing on four main questions concerning conservation value vulnerability to invasion persistence given isolation and priorities when conserving multiple populations Two examples illustrate use of the framework and a final section discusses opportunities for making strategic decisions when faced with the invasion isolation tradeoff

[Invasion Dynamics](#) Cang Hui, David M. Richardson, 2017-01-26 Humans have moved organisms around the world for centuries but it is only relatively recently that invasion ecology has grown into a mainstream research field This book examines both the spread and impact

dynamics of invasive species placing the science of invasion biology on a new more rigorous theoretical footing and proposing a concept of adaptive networks as the foundation for future research Biological invasions are considered not as simple actions of invaders and reactions of invaded ecosystems but as co evolving complex adaptive systems with emergent features of network complexity and invasibility Invasion Dynamics focuses on the ecology of invasive species and their impacts in recipient social ecological systems It discusses not only key advances and challenges within the traditional domain of invasion ecology but introduces approaches concepts and insights from many other disciplines such as complexity science systems science and ecology more broadly It will be of great value to invasion biologists analyzing spread and or impact dynamics as well as other ecologists interested in spread processes or habitat management *Rhizosphere interactions: Root exudates and the rhizosphere microbiome* Linkun Wu,Xingang Zhou,Leslie A. Weston,Shusheng Zhu,2023-10-05

Individual-based Methods in Forest Ecology and Management Arne Pommerening,Pavel Grabarnik,2019-09-17 Model driven individual based forest ecology and individual based methods in forest management are of increasing importance in many parts of the world For the first time this book integrates three main fields of forest ecology and management i e tree plant interactions biometry of plant growth and human behaviour in forests Individual based forest ecology and management is an interdisciplinary research field with a focus on how the individual behaviour of plants contributes to the formation of spatial patterns that evolve through time Key to this research is a strict bottom up approach where the shaping and characteristics of plant communities are mostly the result of interactions between plants and between plants and humans This book unites important methods of individual based forest ecology and management from point process statistics individual based modelling plant growth science and behavioural statistics For ease of access better understanding and transparency the methods are accompanied by R code and worked examples Research in Biodiversity Igor Pavlinov,2011-10-12 The book covers several topics of biodiversity researches and uses containing 17 chapters grouped into 5 sections It begins with an interesting chapter considering the ways in which the very biodiversity could be thought about Noteworthy is the chapter expounding pretty original creativity theory of ecosystem There are several chapters concerning models describing relation between ecological niches and diversity maintenance the factors underlying avian species imperilment and diversity turnover rate of a local beetle group Of special importance is the chapter outlining a theoretical model for morphological disparity in its most widened treatment Several chapters consider regional aspects of biodiversity in Europe Asia Central and South America among them an approach for monitoring conservation of the regional tropical phytodiversity in India is of special importance Of interest is also a chapter considering the history of the very idea of biodiversity emergence in ecological researches Complexity Theory for a Sustainable Future Jon Norberg,Graeme Cumming,2008-07-11 Complexity theory illuminates the many interactions between natural and social systems providing a better understanding of the general principles that can help solve some of today s most pressing environmental issues

Complexity theory was developed from key ideas in economics physics biology and the social sciences and contributes to important new concepts for approaching issues of environmental sustainability such as resilience scaling and networks Complexity Theory for a Sustainable Future is a hands on treatment of this exciting new body of work and its applications bridging the gap between theoretical and applied perspectives in the management of complex adaptive systems Focusing primarily on natural resource management and community based conservation the book features contributions by leading scholars in the field many of whom are among the leaders of the Resilience Alliance Theoreticians will find a valuable synthesis of new ideas on resilience sustainability asymmetries information processing scaling and networks Managers and policymakers will benefit from the application of these ideas to practical approaches and empirical studies linked to social ecological systems Chapters present new twists on such existing approaches as scenario planning scaling analyses and adaptive management and the book concludes with recommendations on how to manage natural resources how to involve stakeholders in the dynamics of a system and how to explain the difficult topic of scale A vital reference for an emerging discipline this volume provides a clearer understanding of the conditions required for systems self organization since the capacity of any system to self organize is crucial for its sustainability over time

Takes the hallmarks of metapopulation theory to the next level by considering a group of communities each of which may contain numerous populations connected by species interactions within communities and the movement of individuals between communities This book seeks to understand how communities work in fragmented landscapes

Community Ecology Herman A. Verhoef, Peter J. Morin, 2010

Community ecology is the study of the interactions between populations of co existing species

Co edited by two prominent community ecologists and featuring contributions from top researchers in the field this book provides a survey of the state of the art in both the theory and applications of the discipline It pays special attention to topology dynamics and the importance of spatial and temporal scale while also looking at applications to emerging problems in human dominated ecosystems including the restoration and reconstruction of viable communities Community Ecology Processes Models and Applications adopts a mainly theoretical approach and focuses on the use of network based theory which remains little explored in standard community ecology textbooks The book includes discussion of the effects of biotic invasions on natural communities the linking of ecological network structure to empirically measured community properties and dynamics the effects of evolution on community patterns and processes and the integration of fundamental interactions into ecological networks A final chapter indicates future research directions for the discipline Official Meeting Program Ecological Society of America.
