3B. Compare how structures and function vary between the six kingdoms.

1.

Kingdom	Cell Type	# of Cells	Cell Wall?	Method of Acquiring Food
Archaeobacteria	Prokaryote	Unicellular	pseudomurein, complex carbohydrates, or protein-glycoproteins	Autotroph or Heterotroph
Eubacteria	Prokaryote	Unicellular	Peptidoglycan (murein)	Autotroph or Heterotroph
Protists	Eukaryote	Unicellular and Multi-cellular	Cellulose in plantlike ones	Autotroph or Heterotroph
Fungi	Eukaryote	Most Multi-cellular	Chitin	Heterotroph
Plants	Eukaryote	Multi-cellular	Cellulose	Autotroph
Animals	Eukaryote	Multi-cellular		Heterotroph

Define:

Heterotrophic	An organism that cannot manufacture its own food and instead obtains its food and energy by taking in organic substances, usually plant or animal matter. All animals, protozoans, fungi, and most bacteria are heterotrophs.
Autotrophic	An organism that manufactures its own food from inorganic substances, such as carbon dioxide and ammonia. Most autotrophs, such as green plants, certain algae, and photosynthetic bacteria, use light for energy. Some autotrophs, such as chemosynthetic bacteria, obtain their energy from inorganic compounds such as hydrogen sulfide by combining them with oxygen.
Prokaryotic	Any of a wide variety of one-celled organisms of the kingdoms Archaeobacteria and Eubacteria that are the most primitive and ancient known forms of life. Prokaryotes lack a distinct cell nucleus and their DNA is not organized into chromosomes. They also lack the internal structures bound by membranes called organelles, such as mitochondria. At the molecular level, prokaryotes differ from eukaryotes in the structure of their lipids and of certain metabolic enzymes, and in how genes are expressed for protein synthesis. Prokaryotes reproduce asexually and include the bacteria and blue-green algae. Also called <i>moneran</i> under the old system of classification.
Eukaryotic	An organism whose cells contain a nucleus surrounded by a membrane and whose DNA is bound together by proteins (histones) into chromosomes. The cells of eukaryotes also contain an endoplasmic reticulum and numerous specialized organelles not present in prokaryotes, especially mitochondria, Golgi bodies, and lysosomes. The organelles are enclosed in a three-part membrane (called a unit membrane) consisting of a lipid bilayer sandwiched between two protein layers. All organisms except for bacteria and archaea are eukaryotes.

2. How do plant and animal kingdoms differ in regards to cell structure?

Plant cells have cell walls for support outside their cell membrane and are usually rectangular in appearance when viewed under the microscope. Most plants are autotrophs and have chloroplasts (plastid organelles filled with chlorophyll) which provide a distinctive green color. These two organelles are key in identifying a plant cell: if they are present it has to be a plant cell.

3C. Examine the evolutionary basis of modern classification systems.

Innovative Computational Intelligence: A Rough Guide to 134 Clever Algorithms Bo Xing, Wen-Jing Gao, 2013-12-13 The first
notable feature of this book is its innovation Computational intelligence CI a fast evolving area is currently attracting lots of
researchers attention in dealing with many complex problems At present there are quite a lot competing books existing in the
market Nevertheless the present book is markedly different from the existing books in that it presents new paradigms of CI
that have rarely mentioned before as opposed to the traditional CI techniques or methodologies employed in other books
During the past decade a number of new CI algorithms are proposed Unfortunately they spread in a number of unrelated
publishing directions which may hamper the use of such published resources These provide us with motivation to analyze the
existing research for categorizing and synthesizing it in a meaningful manner The mission of this book is really important
since those algorithms are going to be a new revolution in computer science We hope it will stimulate the readers to make
novel contributions or even start a new paradigm based on nature phenomena Although structured as a textbook the book s
straightforward self contained style will also appeal to a wide audience of professionals researchers and independent
learners We believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing
cross fertilization of design principles from different design philosophies The second feature of this book is its
comprehensiveness Through an extensive literature research there are 134 innovative CI algorithms covered in this book
