

Ecology

Ecology - the study of the relationships between organisms and their interactions with the environment

LEVELS OF ECOLOGICAL ORGANIZATION

Organism → population → community → ecosystem → biome → biosphere

Standards:

- Describe the levels of ecological organization (i.e., organism, populations, community, ecosystem, biome, biosphere).
- Describe characteristic biotic and abiotic components of aquatic (water) and terrestrial (land) ecosystems.

Organism - is any individual living thing.

Species - is a group of organisms so similar to one another that they can breed.

Population - are groups of individuals that belong to the same species and live in the same area.

Community - the different populations that live together in a specific area.

Ecosystem - a system composed of all the living and non-living components in an environment.

Biome - is a group of ecosystems that have the same climate and similar dominant communities.

Biosphere - is all living things and the places where they exist (air, land, water).

Biotic - A term that describes a living factor in an ecosystem.

Abiotic - A term that describes a nonliving factor in an ecosystem.

Abiotic Factors = soil, sun, water, rocks, temperature, air, gases

Biotic Factors = all plants, animals, fungi, protists and bacteria

Standard:

- Describe how energy flows through an ecosystem (e.g., food chains, food webs, energy pyramids).

Food Chain - A simplified (single) path illustrating the passing of potential chemical energy (food) from one organism to another organism.

Food Web - A complex arrangement of interrelated (multiple) food chains illustrating the flow of energy between interdependent organisms.

Energy Pyramid - A model that illustrates the biomass productivity at multiple trophic levels in a given ecosystem.

Food Chain

Food Web

Energy Pyramid

- Energy is lost as you move up the energy pyramid from one trophic level to the next.
- Only 10% of the energy available within one trophic level is transferred to organisms at the next trophic level.
- There is much more energy in the producer level of a food chain than at the consumer levels.
