Mycorrhizal Fungi in South America Mónica A. Lugo,Marcela C. Pagano,2022-10-27 In order to feed the world global agriculture will have to double food production by 2050 As a result the use of soils with fertilizers and pesticides in agronomic ecosystems will increase taking into account the sustainability of these systems and also the provision of food security Thus soil ecosystems their health and their quality are directly involved in sustainable agronomical practices and it is important to recognize the important role of soil microbial communities such as mycorrhizal fungi their biodiversity interactions and functioning Soil ecosystems are under the threat of biodiversity loss due to an increase of cultivated areas

and agronomic exploitation intensity Also changes in land use alter the structure and function of ecosystems where biodiversity is vital in the ecosystem Soils are a major aid in food production in all terrestrial ecosystems however this means they are also involved in gas emission and global warming Thus in agronomic ecosystems several mitigation practices have been proposed to promote the increase of carbon soil stock and the reduction of warming gas emission from soils In South America most of the rural population depends economically on agriculture and usually works in family units New organic safe and sustainable agro forestry practices must be applied to support local communities and countries to achieve hunger eradication rural poverty reduction and sustainable development This book compiles new information for mycorrhizal occurrence in natural and anthropic environments in South America It includes new reports of mycorrhizal fungi diversity along different mycorrhizal types and their effect on plant communities plant invasions the use of mycorrhizal fungi for ecological and sustainable studies management programs of natural and agroecosystems and forestry and food secure production This book fills the gaps in biodiversity knowledge management and safe food production of mycorrhizas It should be a valuable help to researchers professors and students to aid in use of mycorrhizal fungi while also focusing on their biodiversity sustainable safe food production and conservation perspectives

The pollination of cultivated plants: A compendium for practitioners Food and Agriculture Organization of the United Nations, 2018-10-15 More than twenty years ago the Food and Agriculture Organization of the United Nations contributed to the growing recognition of the role of pollination in agricultural production with the publication of *The Pollination of Cultivated Plants in the Tropics* Since that time the appreciation of pollinators has grown alongside the realization that we stand to lose them But our knowledge and understanding of crop pollination pollinator biology and best management practices has also expanded over this time This volume is the first of two compendiums for practitioners sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones The focus in this first volume is on applied crop and system specific pollination

Chemistry of Plants Margareta Séquin, 2021-02-05

Why are some plants so important to humans The chemistry of the plants has a lot to do with it The plant world offers a fascinating way to explore basic chemistry concepts The spectacular variety of colors fragrances and other characteristics of plants are driven by the seemingly subtle differences in the structure and properties of organic compounds Well known flowers like daffodils and narcissus are examples of plants that provide ample perfumes pigments and poisons as part of their intricate and fascinating chemistry This second edition retains its accessibility expanding on the first edition and combining scientific concepts with colorful pictures and stories in simple clear language Readers will find introductory information on some chemistry and plant biology This prepares them for the more complex chemical structures that compose plant substances many of them of vital importance to humans The final chapter has been expanded in particular the sections on medicinal plants and on genetic modification The end of chapter references have been thoroughly updated with articles books and relevant websites that illustrate the topics discussed Dr Margareta Sequin an organic chemist and plant enthusiast has taught popular undergraduate college level courses on plant chemistry to non chemistry majors and has led numerous field seminars for the general public The comments and questions from these audiences and the topics that especially captured people's interest have greatly shaped this book The Chemistry of Plants addresses an audience with little previous chemistry knowledge but will appeal to the expert reader looking for an understanding of more complex plant compounds It can be used both as a text to introduce organic chemistry as it relates to plants and as a text of reference for more advanced readers

Ecology and Evolution of Plants under Domestication in the Neotropics Alejandro Casas, Ana H. Ladio, Charles R. Clement, 2019-09-25 The Neotropical area is a main setting of the earliest experiences of domestication of plants and evolutionary processes guided by humans which continue being active in the area Studies comprised in this Research Topic show a general panorama about similarities and particularities of processes of domestication for different plant groups and regions some of them illustrate how the domestication processes originated and diffused how landscape domestication has operated and continues being practiced and others discuss some of the main challenges for designing policies for biosafety and conservation of plant genetic resources It is an attempt to identify main topics for research on evolution under domestication and opportunities that researchers can find in the Neotropics to understand how and why these processes occurred in the past and present

McManis, 2012-05-04 How do we promote global economic development while simultaneously preserving local biological and cultural diversity This authoritative volume written by leading legal experts and biological and social scientists from around the world aims to address this question in all of its complexity The first part of the book focuses on biodiversity and examines what we are losing why and what is to be done The second part addresses biotechnology and looks at whether it is part of the solution or part of the problem or perhaps both The third section examines traditional knowledge explains what it is and how if at all it should be protected The fourth and final part looks at ethnobotany and bioprospecting and offers practical lessons from the vast and diverse experiences of the contributors Germes, Seeds and Animals: Alfred W. Crosby, 2015-03-04 Alfred Crosby almost alone redirected the attention of historians to ecological issues that were important precisely because they were global In doing so he answered those who believed that world history had become impossible as a consequence of the post war proliferation of new historical specialities including not only ecological history but also new social histories areas studies histories of mentalities and popular cultures and studies of minorities majorities and ethnic groups In the introduction to this volume Professor Crosby recounts an intellectual path to ecological history that might stand as a rationale for world history in general He simply decided to study the most pervasive and important aspects of human experience By focusing on human universals like death and disease his studies highlight the epidemic rather than the epiphenomenal Environmental Biology for Engineers and Scientists David A. Vaccari, Peter F. Strom, James E. Alleman, 2005-10-27 The growth of the environmental sciences has greatly expanded the scope of biological disciplines today's engineers have to deal with Yet despite its fundamental importance the full breadth of biology has been given short shrift in most environmental engineering and science courses Filling this gap in the professional literature *Environmental Biology for Engineers and Scientists* introduces students of chemistry physics geology and environmental engineering to a broad range of biological concepts they may not otherwise be exposed to in their training Based on a graduate level course designed to teach engineers to be literate in biological concepts and terminology the text covers a wide range of biology without making it tedious for non biology majors Teaching aids include Notes problems and solutions Problem sets at the end of each chapter PowerPoints r of many figures A valuable addition to any civil engineering and environmental studies curriculum this book also serves as an important professional

reference for practicing environmental professionals who need to understand the biological impacts of pollution
