Wescott, 2005-12-21 Although archaeologists are using GIS technology at an accelerating rate publication of their work has not kept pace A state of the art exploration the subject GIS and Archaeological Site Location Modeling pulls together discussions of theory and methodology scale data quantitative methods and cultural resource management and uses loc Practical Applications of GIS for Archaeologists Konnie L. Wescott, R. Joe Brandon, 1999-12-23 GIS is the most powerful technology introduced to archaeology since the introduction of carbon 14 dating The most widespread use of this technology has been for the prediction of archaeological site locations Practical Applications of GIS for Archeologists A Predictive Modeling Kit focuses on the use of GIS for archaeological predictive modeling The contributors include internationally recognized researchers who have been at the forefront of this revolutionary integration of GIS and archaeology as well as first generation researchers who have begun to critically apply this new technology and explore its theoretical implications A CD ROM of color illustrations is provided

**Case Studies in Archaeological Predictive Modelling** Philip Verhagen, 2007 Dutch archaeology has experienced profound changes in recent years This has led to an increasing use of archaeological predictive modelling a technique that uses information about the location of known early human settlements to predict where additional settlements may have been located Case Studies in Archaeological Predictive Modelling is the product of a decade of work by Philip Verhagen as a specialist in geographical information systems at RAAP Archeologisch Adviesbureau BV one of the leading organizations in the field the case studies presented here provide an overview of the field and point to potential future areas of research Archaeological Spatial Analysis Mark Gillings, Piraye Hacıgüzeller, Gary Lock, 2020-01-16

Effective spatial analysis is an essential element of archaeological research this book is a unique guide to choosing the appropriate technique applying it correctly and understanding its implications both theoretically and practically Focusing upon the key techniques used in archaeological spatial analysis this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus Each chapter tackles a specific technique or application area and follows a clear and coherent structure First is a richly referenced introduction to the particular technique followed by a detailed description of the methodology then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals

**3D Delineation: A modernisation of drawing methodology for field archaeology**

Justin J.L. Kimball, 2016-02-08 How can 3D models be integrated more fully alongside other forms of archaeological documentation This work presents a method that combines the interpretative power of traditional archaeological drawings and the realistic visualisation capacity of 3D digital models

*Geospatial Technology and the Role of Location in Science*

Henk J. Scholten, Rob Velde, Niels van Manen, 2009-07-06 Globalisation has not led to the death of geography Intensified relations between communities in different parts of the world have only highlighted the need for understanding and managing phenomena on a variety of geographic scales From global warming to credit crunch and from epidemics to terrorism causes and solutions are sought on local regional national as well as inter continental levels With the advent of Geospatial Technology scholars policymakers and entrepreneurs have valuable tools in hand to proceed This book offers the first systematic account of the science behind this mental and technological revolution Tracing the adoption and dissemination of Geospatial Technology in a range of disciplines it examines the impact this technology has had and is likely to have on the explanation of spatial behaviour phenomena and processes At the same time stressing innovative usage it explores scientific contributions to technology advancement

GIS Based Archaeological Site Location Modeling in Pitt County, North Carolina Jonathan Schleier, 2010 Archaeologists have employed Geographic Information Systems GIS software in the generation of predictive models for over thirty years In the interest of creating a state wide predictive model the North Carolina Department of Transportation NCDOT commissioned a pilot study in seven counties Cabarrus Chatham Forsyth Granville Guilford Randolph and Wake of the Piedmont region The primary goal of this thesis was to quantitatively examine the applicability of the Piedmont model to the Coastal Plain environment specifically Pitt County This thesis has demonstrated that the Piedmont predictive model does translate well to the Coastal Plain Additionally the predictive power of a model employing a generalized archaeological database the Coastal Plain Model was tested against a model employing a time period specific archaeological database Coastal Archaic and Coastal Woodland models respectively The Coastal Archaic

and Coastal Woodland models proved to have more predictive power than the Coastal Plain A third research question analyzes the settlement decisions of archaic and woodland groups which are inferred from statistical data

*Palaeolandscapes in Archaeology* Mike T. Carson, 2021-11-29 What can we learn about the ancient landscapes of our world and how can those lessons improve our future in the landscapes that we all inhabit Those questions are addressed in this book through a practical framework of concepts and methods combined with detailed case studies around the world The chapters explore the range of physical and social attributes that have shaped and re shaped our landscapes through time International authors contributed the latest results of investigating ancient landscapes or palaeolandscapes in diverse settings of tropical forests deserts river deltas remote islands coastal zones and continental interiors The case studies embrace a broadly accommodating approach of combining archaeological evidence with other avenues of research in earth sciences biology and social relations Individually and in concert the chapters offer new perspectives on what the world s palaeolandscapes looked like how people lived in these places and how communities have engaged with long term change in their natural and cultural environments through successive centuries and millennia The lessons are paramount for building responsible strategies and policies today and into the future noting that many of these issues from the past have gained more urgency today This book reaches across archaeology ecology geography and other studies of human environment relations that will appeal to general readers Specialists and students in these fields will find extra value in the primary datasets and in the new ideas and perspectives Furthermore this book provides unique examples from the past toward understanding the workings of sustainable landscape systems

*Digital History and Hermeneutics* Andreas Fickers, Juliane Tatarinov, 2022-06-21 As a result of rapid advancements in computer science during recent decades there has been an increased use of digital tools methodologies and sources in the field of digital humanities While opening up new opportunities for scholarship many digital methods and tools now used for humanities research have nevertheless been developed by computer or data sciences and thus require a critical understanding of their mode of operation and functionality The novel field of digital hermeneutics is meant to provide such a critical and reflexive frame for digital humanities research by acquiring digital literacy and skills A new knowledge for the assessment of digital data research infrastructures analytical tools and interpretative methods is needed providing the humanities scholar with the necessary munition for doing critical research The Doctoral Training Unit Digital History and Hermeneutics at the University of Luxembourg applies this analytical frame to 13 PhD projects By combining a hermeneutic reflection on the new digital practices of humanities scholarship with hands on experimentation with digital tools and methods new approaches and opportunities as well as limitations and flaws can be addressed

Modelling Human-Environment Interactions in and beyond Prehistoric Europe Samuel Seuru, Benjamin Albouy, 2023-07-25 This book offers insight into the relationship between prehistoric and protohistoric human populations and the world around them It reconstructs key aspects of the palaeoenvironment from large

scale drivers of environmental conditions such as climate to more regional variables such as vegetation cover and faunal communities The volume underscores how computational archaeology is leading the way in the study of past human environment interactions across spatial and chronological scales With the increased availability of high resolution climate models agent based modelling palaeoecological proxies and the mature use of Geographic Information System in ecological modelling archaeologists working in interdisciplinary settings are well positioned to explore the intersection of human systems and environmental affordances and constraints These methodological advancements provide a better understanding of the role humans played in past ecosystems both in terms of their impact upon the environment and in return the impact of environmental conditions on human systems They may also allow us to infer past ecological knowledge and land use patterns that are historically contingent rather than environmentally determined This volume gathers contributions that combine reconstructions of past environments and archeological data with a view to exploring their complex interactions at different scales and invites scholars from varying disciplines and backgrounds to present and compare different modelling approaches

**Uncertainty and Imprecision in Decision Making and Decision Support: Cross-Fertilization, New Models and Applications** Krassimir T. Atanassov, Janusz Kacprzyk, Andrzej Kałuszko, Maciej Krawczak, Jan Owsiniński, Sotir Sotirov, Evdokia Sotirova, Eulalia Szmidt, Sławomir Zadrozny, 2017-10-06 This book presents selected papers from two important conferences held on October 12-14 2016 in Warsaw Poland the Fourteenth National Conference of Operational and Systems Research BOS 2016 one of the premiere conferences in the field of operational and systems research not only in Poland but also at the European level and the Fifteenth International Workshop on Intuitionistic Fuzzy Sets and General Nets IWIFSGN 2016 one of the foremost conferences on fuzzy logic notably addressing extensions of the traditional fuzzy sets as well as the Generalized Nets GNs a powerful extension of the traditional Petri net paradigm The scope of the BOS conferences includes all types of problems related to systems modeling systems analysis broadly perceived operational research optimization decision making and decision support to name but a few In all these areas virtually all models used have to take into account not only uncertainty in its traditional sense but also imprecision of information That is in addition to traditional probabilistic and statistical tools and techniques the use of methods based on fuzzy sets can also be sensible Even more so employing certain extensions of the classic concept of a fuzzy set can be very useful Applying intuitionistic fuzzy sets which are at the core of the IWIFSGN conferences is a good example Both conferences BOS 2016 and IWIFSGN 2016 offered ideal venues for the exchange of ideas cross fertilization and mutual inspiration

Modelling Human Behaviour in Landscapes Oliver Nakoinz, Daniel Knitter, 2016-04-08 This volume is designed as a 12 lecture textbook which can serve as a course companion self teaching guide and handbook for basic concepts Each lecture comprises 20 pages in which the methods are introduced examples shown and the code is given All examples are computed with open source software mainly R and with archaeological data available from the book's website The book does not describe elaborated high end models but rather very

basic modelling concepts that serve as components in more complex models The book enables the reader to construct such models by themselves and be sensitive for certain problems In addition it gives hints for the interpretation of the results Students are usually quick to apply fancy methods yet fail in the proper interpretation due to a lack of understanding of the underlying principles This problem is addressed by the proposed book through three concepts 1 Command line software forces the students to first learn some details before they are able to produce results on their own 2 The book is focused on principles and methods When the students understand a few basic principles they have far better access to a wide range of related methods 3 Examples of poor analysis highlight common pitfalls The volume attempts to be an applied minimalistic and efficient textbook and is based upon several successful courses *The Cultural Landscape & Heritage Paradox* Tom Bloemers, Henk Kars, Arnold Van der Valk, 2010 The basic problem is to what extent we can know past and mainly invisible landscapes and how we can use this still hidden knowledge for actual sustainable management of landscape s cultural and historical values It has also been acknowledged that heritage management is increasingly about the management of future change rather than simply protection This presents us with a paradox to preserve our historic environment we have to collaborate with those who wish to transform it and in order to apply our expert knowledge we have to make it suitable for policy and society The answer presented by the Protection and Development of the Dutch Archaeological Historical Landscape programme pdl bbo is an integrative landscape approach which applies inter and transdisciplinarity establishing links between archaeological historical heritage and planning and between research and policy **CRM**, 2010

*Archeologia e Calcolatori*, 13, 2002 - XIV Congress of the I.U.P.P.S. - Data Management and Mathematical Methods in Archaeology François Djindjian, Paola Moscati, 2002-10-01 *The Archaeology of Human-Environment Interactions* Daniel Contreras, 2016-08-25 The impacts of climate change on human societies and the roles those societies themselves play in altering their environments appear in headlines more and more as concern over modern global climate change intensifies Increasingly archaeologists and paleoenvironmental scientists are looking to evidence from the human past to shed light on the processes which link environmental and cultural change Establishing clear contemporaneity and correlation and then moving beyond correlation to causation remains as much a theoretical task as a methodological one This book addresses this challenge by exploring new approaches to human environment dynamics and confronting the key task of constructing arguments that can link the two in concrete and detailed ways The contributors include researchers working in a wide variety of regions and time periods including Mesoamerica Mongolia East Africa the Amazon Basin and the Island Pacific among others Using methodological vignettes from their own research the contributors explore diverse approaches to human environment dynamics illustrating the manifold nature of the subject and suggesting a wide variety of strategies for approaching it This book will be of interest to researchers and scholars in Archaeology Paleoenvironmental Science Ecology and Geology **Park Science**, 2012 **Mon/Fayette Transportation Project, Uniontown to Brownsville Area,**
