Glioma Principles And Practice In Neuro Oncology:

Glioma A.B.M.F. Karim, Edward R. Jr. Laws, 2012-12-06 Many recent developments in neuro oncology relevant to clinical practice have contributed to improved patient care The most important impact of these developments on treatment may have been a change in the attitudes of the neuro oncologists involved in making decisions regarding patients with gliomas From an era of uncertainty which led to therapeutic nihilism we have entered one of active interventions based on objective parameters for the treatment of gliomas which may be either slow growing or rapid killers The histopathological characteristics of gliomatous lesions are intriguing and it is only recently that a clearer picture has begun to emerge A group of dedicated neuropathologists has been attempting to reach a consensus on pathological classification and grading providing an important landmark in the field of neuro oncology This book does not mean to provide exhaustive details on the histopathology of gliomas but rather highlights the main problems in an authoritative chapter This chapter attempts to guide the reader to a better understanding of all aspects of the neuropathology of glioma Neuroradiology has recently seen several breakthroughs Images unimaginable a decade ago are now providing us with an almost three dimensional impression But the concomitant illusions and artifacts must also be kept in mind and pragmatic ideas are carefully put forward in this book about the developing body of knowledge concerning the newer imaging techniques Principles & Practice of Neuro-Oncology, 2010-10-21 Neuro oncologic brain and spine cancers account for 19 000 new cases and 13 000 deaths per year The early and proper diagnosis of these virulent cancers is critical to patient outcomes and diagnosis and treatment strategies are continually evolving The multidisciplinary team that manages these patients involves medical and radiation oncology neurosurgery neuroimaging nurses and therapists Principles and Practices of Neuro Oncology establishes a new gold standard in care through a comprehensive multidisciplinary text covering all aspects of neuro oncology Six major sections cover all topics related to epidemiology and etiology molecular biology clinical features and supportive care imaging neuroanatomy and neurosurgery medical oncology and targeted therapies and radiation oncology for adult and pediatric cancers Expert contributors from multiple disciplines provide detailed and in depth discussions of the entire field of neuro oncology including histopathologic harmonization neurosurgical techniques quality of life and cognitive functions and therapeutic changes in terms of combined modality treatments advanced radiation techniques the advent of new drugs especially targeted agents and the tantalizing early promise of personalized therapeutic approaches With contributions from over 180 authors numerous diagrams illustrations and tables and a 48 page color section Principles and Practice of Neuro Oncology reflects the breadth and depth of this multifaceted specialty **Neuro-Oncology** P. Paoletti, Kintomo Takakura, M.D. Walker, G. Butti, S. Pezzotta, 2012-12-06 This volume contains the proceedings of the latest in a series of international symposia on advances in neuro oncology held September 26-29 1990 in San Remo Italy and sponsored by the University of Pavia I R C C S Policlinico San Matteo Pavia Italy and the Giovanni Lorenzini Medical Foundation Milan

Houston It drew papers from six continents of the world was attended by over 500 investigators and demonstrated the extraordinary vitality depth and breadth of research which characterizes modern neuro oncology Over the course of the last decade there has been a remarkable shift in research carried out in the heterogeneous field of neuro oncology which appears to be away from clinical descriptive studies and toward more basic and fundamental investigation of the pathology immunohistochemistry biochemical and cellular subsets of brain tumors Besides the traditional fields of neurology neurosurgery neuropathology and radiation therapy there has been an increased interest and involvement by investigators in the fields of medical oncology neuroradiology immunology and many areas of fundamental neurobiology It has become evident that interest has also been exhibited in a broader spectrum of tumors than just the malignant glial series and studies in meningioma craniopharyngioma neurinomas and the pituitary tumors were reported Several sessions were devoted to the special problems of pediatric brain tumors

Neuro-Oncology Pietro Paoletti, Università di Pavia, Istituto di ricovero e cura a carattere scientifico. Policlinico S. Matteo, Fondazione Giovanni Lorenzini, 1991 This volume focuses on the present state of biological research as well as the diagnosis and treatment of nervous system neoplasia The section concerning Biology and Diagnosis describes the aspect related to brain tumour classification and neuro radiological diagnosis Papers on oncogenes and growth factor expression are also included The role of surgery radiotherapy and chemotherapy as well as new therapeutic approaches is described in the section on Therapy of Gliomas Neuro Oncology presents an up to date review of research on biological studies and the treatment of meningiomas neuronomas craniopharyngiomas pinealomas metastatic tumours and cerebral tumours in children written by some of the most respected neurosurgeons in the world The book is recommended not only to neurosurgeons and neurologists but also to all researchers actively working in the field of neuro oncology

Management in Neuro-Oncology Jerzy Hildebrand, 2012-12-06 The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer There are two main reasons why such an initiative was considered necessary Firstly the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated Secondly the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly With its residential courses for organ pathologies and the seminars on new techniques laser monoclonal antibodies imaging techniques etc or on the principal therapeutic controversies conservative or mutilating surgery primary or adjuvant chemotherapy radiotherapy alone or integrated it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice One of the more recent initiatives of ESO has been the institution of permanent study groups also called task forces where a limited number of leading experts are invited to meet once a year with the aim of defining the state of the art and possibly reaching a
