Water Resources Shimon C. Anisfeld, 2011-01-03 In this concise introduction to water resources Shimon Anisfeld explores the fundamental interactions between humans and water including drinking sanitation irrigation and power production The book familiarizes students with the current water crisis and with approaches for managing this essential resource more effectively in a time of rapid environmental and social change Anisfeld addresses both human and ecological problems including scarcity pollution disease flooding conflicts over water and degradation of aquatic ecosystems In addition to providing the background necessary to understand each of these problems the book discusses ways to move towards better management and addresses the key current debates in the water policy field In the past water development has often proceeded in a single sector fashion with each group of users implementing its own plans without coordination with other groups resulting in both conflict and inefficiency Now Anisfeld writes the challenge of water management is figuring out how to balance all the different demands for water from sanitation to energy generation to ecosystem protection For inquiring students of any level Water Resources provides a comprehensive one volume guide to a complex but vital field of study

Coastal Governance Richard Burroughs, 2011 Coastal Governance provides a clear overview of how U S coasts are currently managed and explores new approaches that could make our shores healthier Drawing on recent national assessments Professor Richard Burroughs explains why traditional management techniques have ultimately proved inadequate leading to polluted waters declining

fisheries and damaged habitat He then introduces students to governance frameworks that seek to address these shortcomings by considering natural and human systems holistically The book familiarizes students not only with current management techniques but with the policy process By focusing on policy development Coastal Governance prepares readers with the knowledge to participate effectively in a governance system that is constantly evolving This understanding will be critical as students become managers policymakers and citizens who shape the future of the coasts *The Power of Deliberation* Ian Johnstone, 2011-04-19 Arguing about matters of public policy is ubiquitous in democracies The ability to resolve conflicts through peaceful contestation is a measure of any well ordered society Arguing is almost as ubiquitous in international affairs yet it is not viewed as an important element of world order In *The Power of Deliberation* International Law Politics and Organizations Ian Johnstone challenges the assumption that arguing is mere lip service with no real impact on the behavior of states or the structure of the international system Johnstone focuses on legal argumentation and asks why if the rhetoric of law is inconsequential governments and other international actors bother engaging in it Johnstone joins the efforts of international relations scholars and democracy theorists who consider why argumentation occurs beyond nation states He focuses on deliberation in and around international organizations drawing on various strands of legal political and international relations theory to identify common features of legal argumentation and deliberative politics Johnstone's central claim is that international organizations are places where interpretive communities coalesce and the quality of the deliberations these communities provoke is a measure of the legitimacy of the organization Transboundary Pollution S. Jayakumar, Tommy Koh, Robert Beckman, Hao Duy Phan, 2015-05-29 This important new book provides a comprehensive overview of the international legal principles governing transboundary pollution In doing so the experts writing in this book examine the practical applications of the State responsibility doctrine in *Transboundary Risk Governance* Rolf Lidskog, Linda Soneryd, Ylva Uggla, 2010 Governing environmental risk particularly large scale transboundary risks associated with climate change and pollution is one of the most pressing problems facing society **Progress or Collapse** Roberto De Vogli, 2013-01-03 Human progress is heading toward collapse There are converging ecological crises looming on the horizon climate change peak oil water shortages fish depletion and food scarcities The world is on a collision course against the limits of the ecosystem Modern societies are consuming polluting and growing as if there is no tomorrow Indeed there may not be one In *Progress or Collapse* Roberto De Vogli guides us through the multiple converging global crises of economic progress He explores the connections between the environmental crisis and the psychological social cultural political and economic emergencies affecting modern societies It is not a coincidence the author argues that global ecological destruction is occurring in tandem with other crises rising mental disorders mindless consumerism rampant conformism status competition civic disengagement startling social inequalities global financial instability and widespread political impasse In this hard hitting analysis Roberto De Vogli identifies the root cause of all these symptoms of societal breakdown neoliberalism defined

as market greed He argues that in recent decades modern societies have been dominated by a suicidal economic doctrine based on two articles of faith the greed creed and the market God The greed creed states that people are nothing but selfish profiteers in a perpetual search for status and wealth The market God is the belief that all societal and human affairs are best regulated as market exchanges What is to be done Can we stop progress toward collapse Given the current distribution of power and wealth and the state of psychological and political inertia in which we are trapped our chances of redefining progress around alternative values and embracing a new philosophy of life are slim Yet the history of human emancipation has often been shaped by giant leaps forward In the past civic struggles have overcome the limits of the possible Whether this will happen again in the future is the central question of our time This book will be of interest to researchers and students of ecology psychology public health epidemiology human development political philosophy economics sociology and politics

Ecology and Ecosystem Conservation Oswald J. Schmitz, 2013-03-19 Meeting today's environmental challenges requires a new way of thinking about the intricate dependencies between humans and nature Ecology and Ecosystem Conservation provides students and other readers with a basic understanding of the fundamental principles of ecological science and their applications offering an essential overview of the way ecology can be used to devise strategies to conserve the health and functioning of ecosystems The book begins by exploring the need for ecological science in understanding current environmental issues and briefly discussing what ecology is and isn't Subsequent chapters address critical issues in conservation and show how ecological science can be applied to them The book explores questions such as What is the role of ecological science in decision making What factors govern the assembly of ecosystems and determine their response to various stressors How does Earth's climate system function and determine the distribution of life on Earth What factors control the size of populations How does fragmentation of the landscape affect the persistence of species on the landscape How does biological diversity influence ecosystem processes The book closes with a final chapter that addresses the need not only to understand ecological science but to put that science into an ecosystem conservation ethics perspective **New**

Critical Writings in Political Sociology Alan Scott, 2017-03-02 In the third and final volume of this series we examine the implications of the accelerating globalization process for the nation state Are globalization the rise of regional and international institutions and the international agreements on human rights actually reducing and transforming state sovereignty Clearly ethnic racial and religious identities remain salient but how do they correspond to intersect with and overflow continuous nation state spaces that are demarcated by legally recognized borders In what conditions do democratic state building projects actually enhance political civil and social rights and when do they tend to contribute to the consolidation of elite power Should democratic forces put their faith in a cosmopolitan vision of global citizenship especially when they tackle quintessentially international and transnational problems like peace aboriginal rights and the protection of the environment In this volume's collection of contemporary political sociologists key articles we present work that explores

the exposure of the nation state and the post World War II world system to global forces **ECOLOGICAL NATIONALISM**
